

Designing for an Active Transition into a Retirement Lifestyle

Adam Barry, Amy Chang, Ethan Hellman, Brendan McLoughlin

CS 147 • F23 • Stanford University

Outline

1. Problem & Solution
2. Values in Design
3. Tasks
4. Usability goals & metrics
5. Revised Interfaces Sketches
6. Medium-fi task flows
7. Prototype Implementation

THE PROBLEM

Elderly people who lack community and contribution to something bigger than themselves often feel lonely and purposeless.

Problem & Solution

Needs & solution

NEEDS

✓ Create sense of purpose

✓ Prevent loneliness

SOLUTION

App that organizes shared gardens & strengthens community

VALUE PROP

**Creating newfound purpose and
friendships through gardening**

Values in Design

1. Its about people, not plants
2. Gentle accountability
3. Extreme accessibility

It's about people, not plants

Accountability flow instead of harvest flow

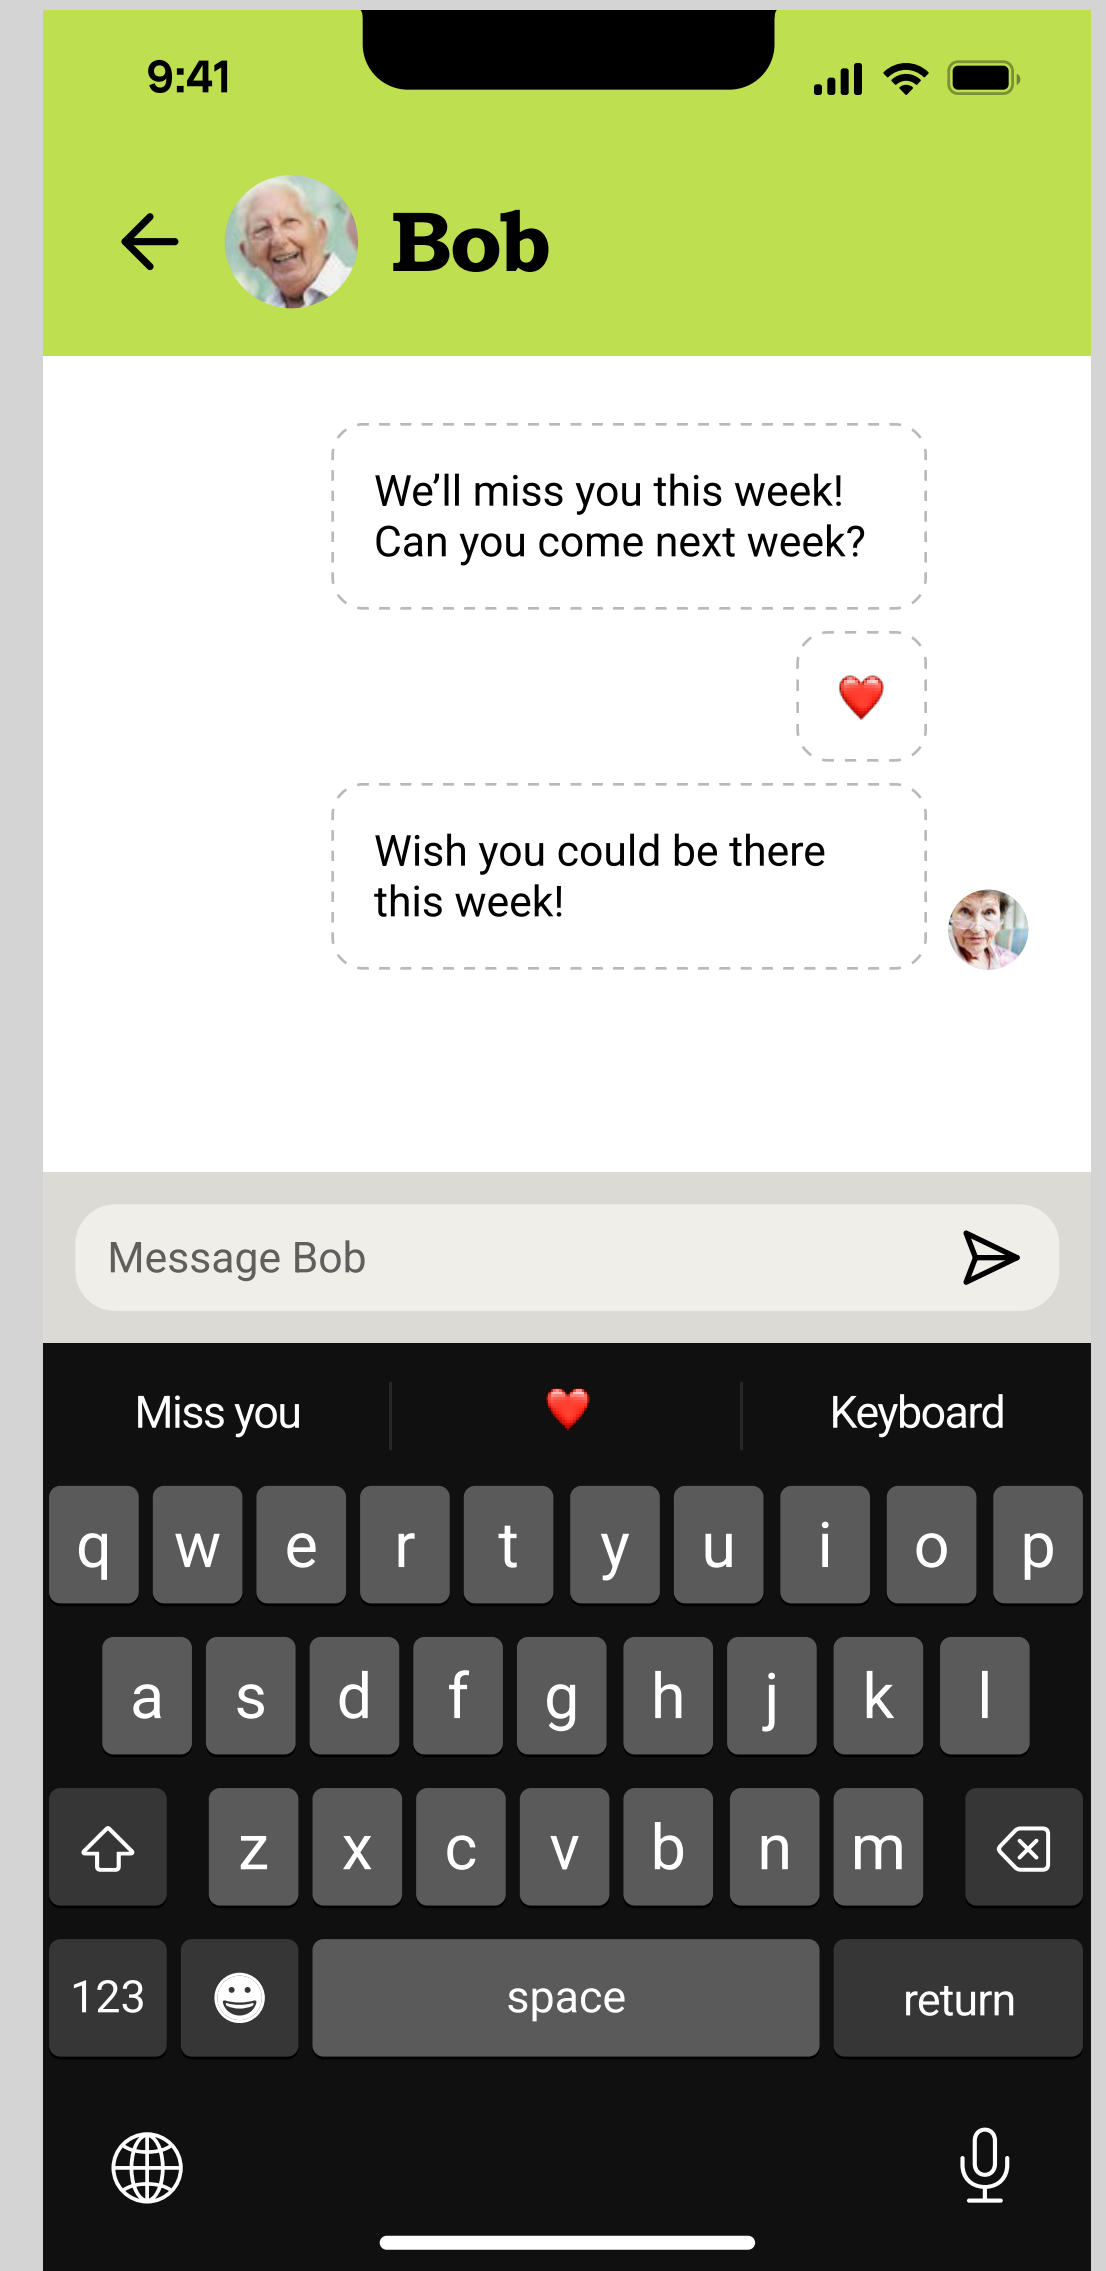

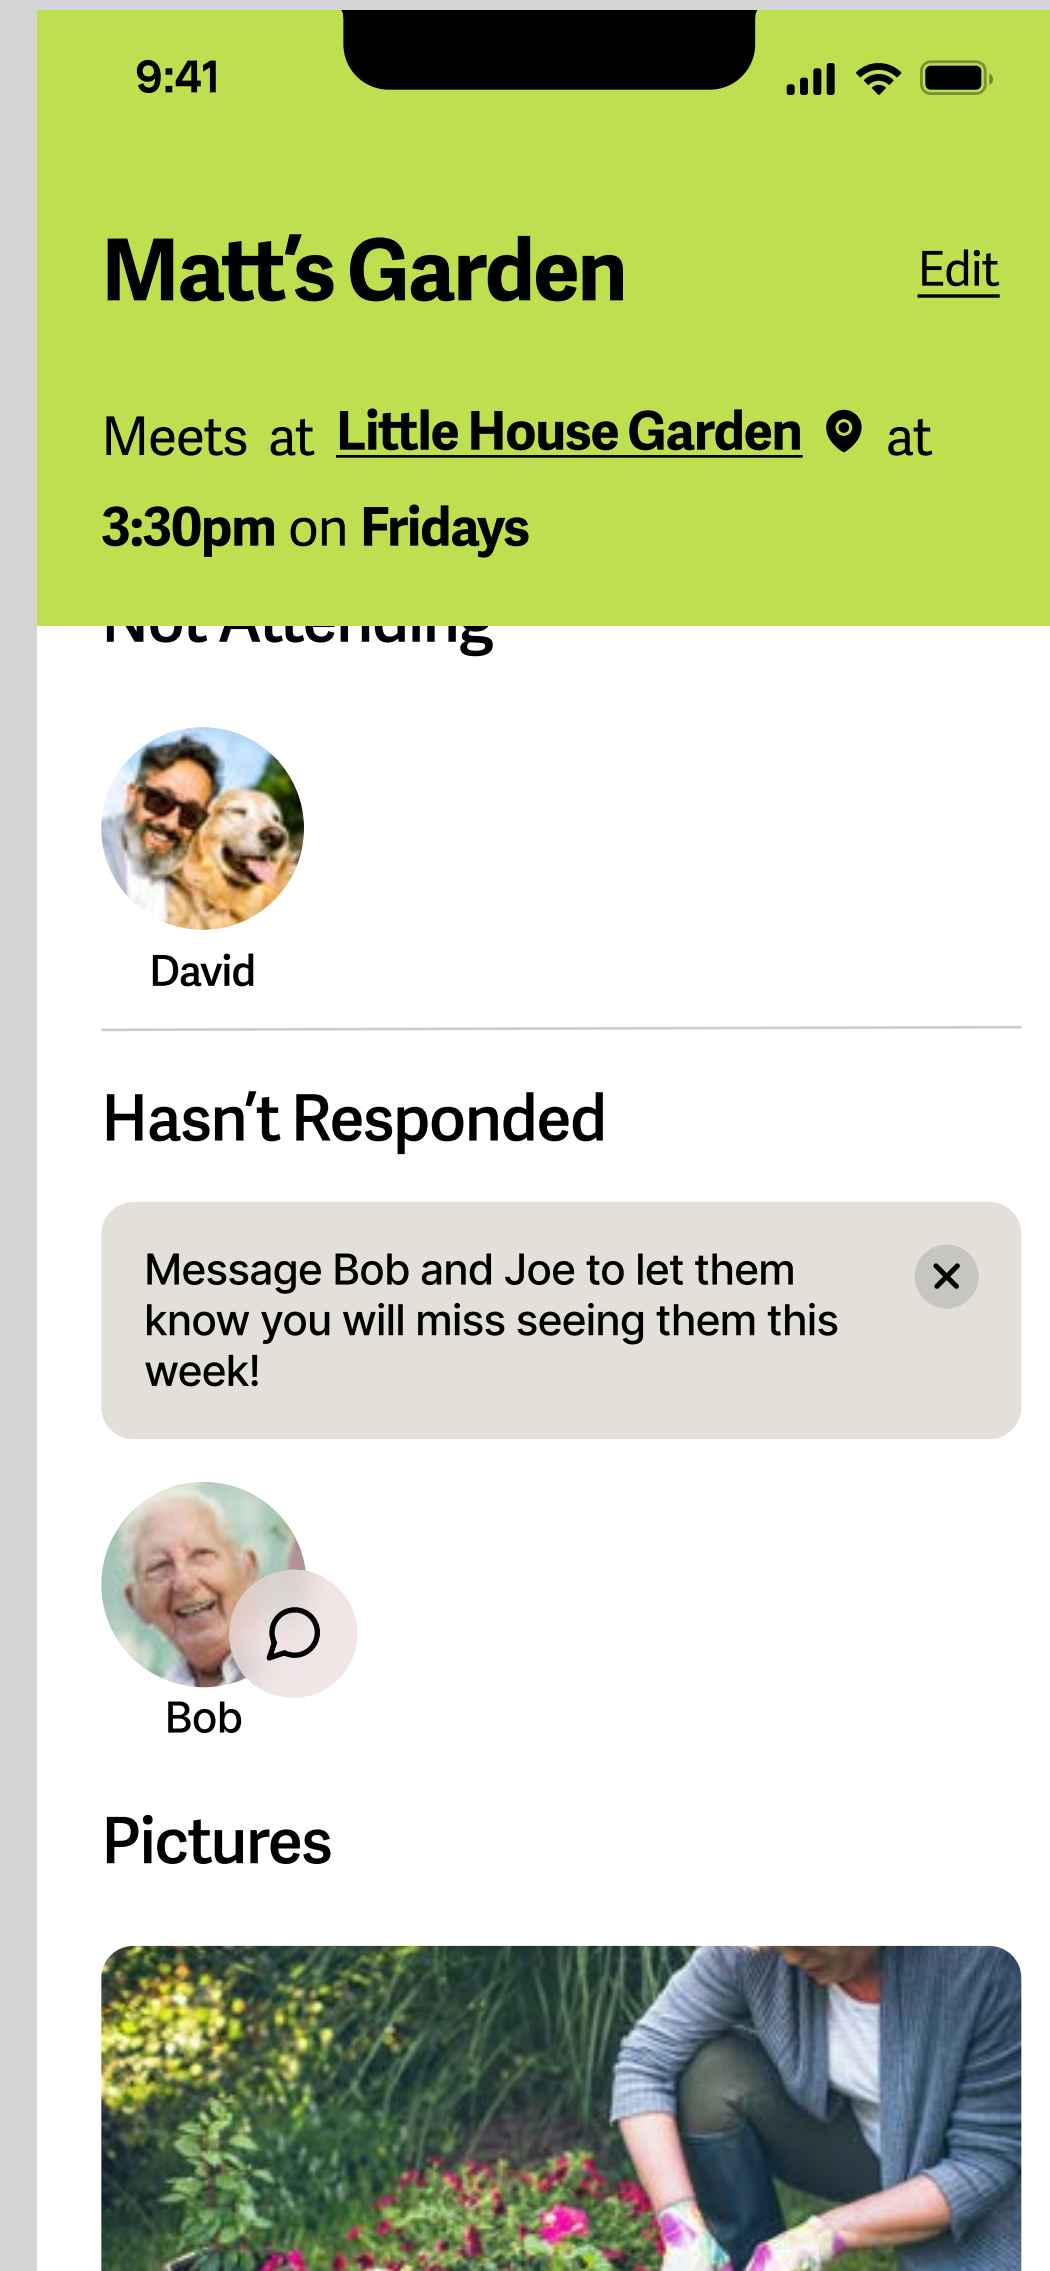

Decided to revisit harvest task flow and scrap it...because it didn't achieve that value

Gentle Accountability

Being ~missed~

Rather than strict attendance feature,
want something subtle that people
can act on...a small thing to make
someone feel seen

Extreme Accessibility

- 1. Larger Buttons** (Salman et al., 2022)
- 2. Higher Contrast** (Alsswey & Al-Samarraie, 2019)
- 3. Full-Sentence Instructions** (Chia et al., 2018)
- 4. Simplicity & Clarity** (Alsswey et al., 2022)
- 5. Blue and Green Confusion** (Kvitle et al., 2016)

Tensions

- 1. “Subtlety” runs in the face of large buttons and full sentences**
- 2. Is accountability at odds with friendship formation?**

Usability Goals & Key Metrics

Name	Goal	Metrics
Ease of Learning	Users can quickly learn how to navigate and use the app's basic features.	<div>1. Time to complete specific tasks for the first time. (mins / secs)</div> <div>2. User success rate on first attempt. . (percentage)</div>
Memorability	A returning user can re-establish proficiency quickly.	<div>1. Time taken for a returning user to complete tasks after a period of not using the app. (mins / secs)</div> <div>2. Error rates for returning users. (percentage)</div>

we show progress on these later

Tasks

Tasks

Annotated Task Flows

3: Didn't really understand how the logging worked

WELCOME
TO
Sage

LOGIN

REGISTER

2: User initially went to login even though they hadn't become a user yet

2: Confusion with the idea of being a first time user "what do you want me to do here?"

3: Didn't know what name to enter when joining the garden ("what name do I put in?")

LOGIN

NAME

GARDEN NAME

LOGIN

3: Login page was not like ones she had encountered before - did not like the fact that it was not username and password

HARVEST

CHARITIES NEARBY:

NEXT

3: Confused at times which direction to take with the app (invite or harvest)

2: Wants to be able to assign jobs / responsibilities to different individuals within the group (perhaps calls for a group administrator)

2: Couldn't distinguish what the options were on the home page
"I can't tell what I am supposed to do next"

Logging page was super sparse / devoid of information (need to add in more ways to log, and more detail when it comes to logging i.e. what type of plant, how many, by who, etc)

INVITE FRIENDS TO LITTLE HOUSE GARDEN

CONTACTS:

1: Text boxes on invite page look too much like text input fields

The harvesting task flow should be highlighted better when the time comes to harvest

3: Didn't know whether to harvest or invite first... "am I inviting people to harvest?"

Old LoFi Prototype

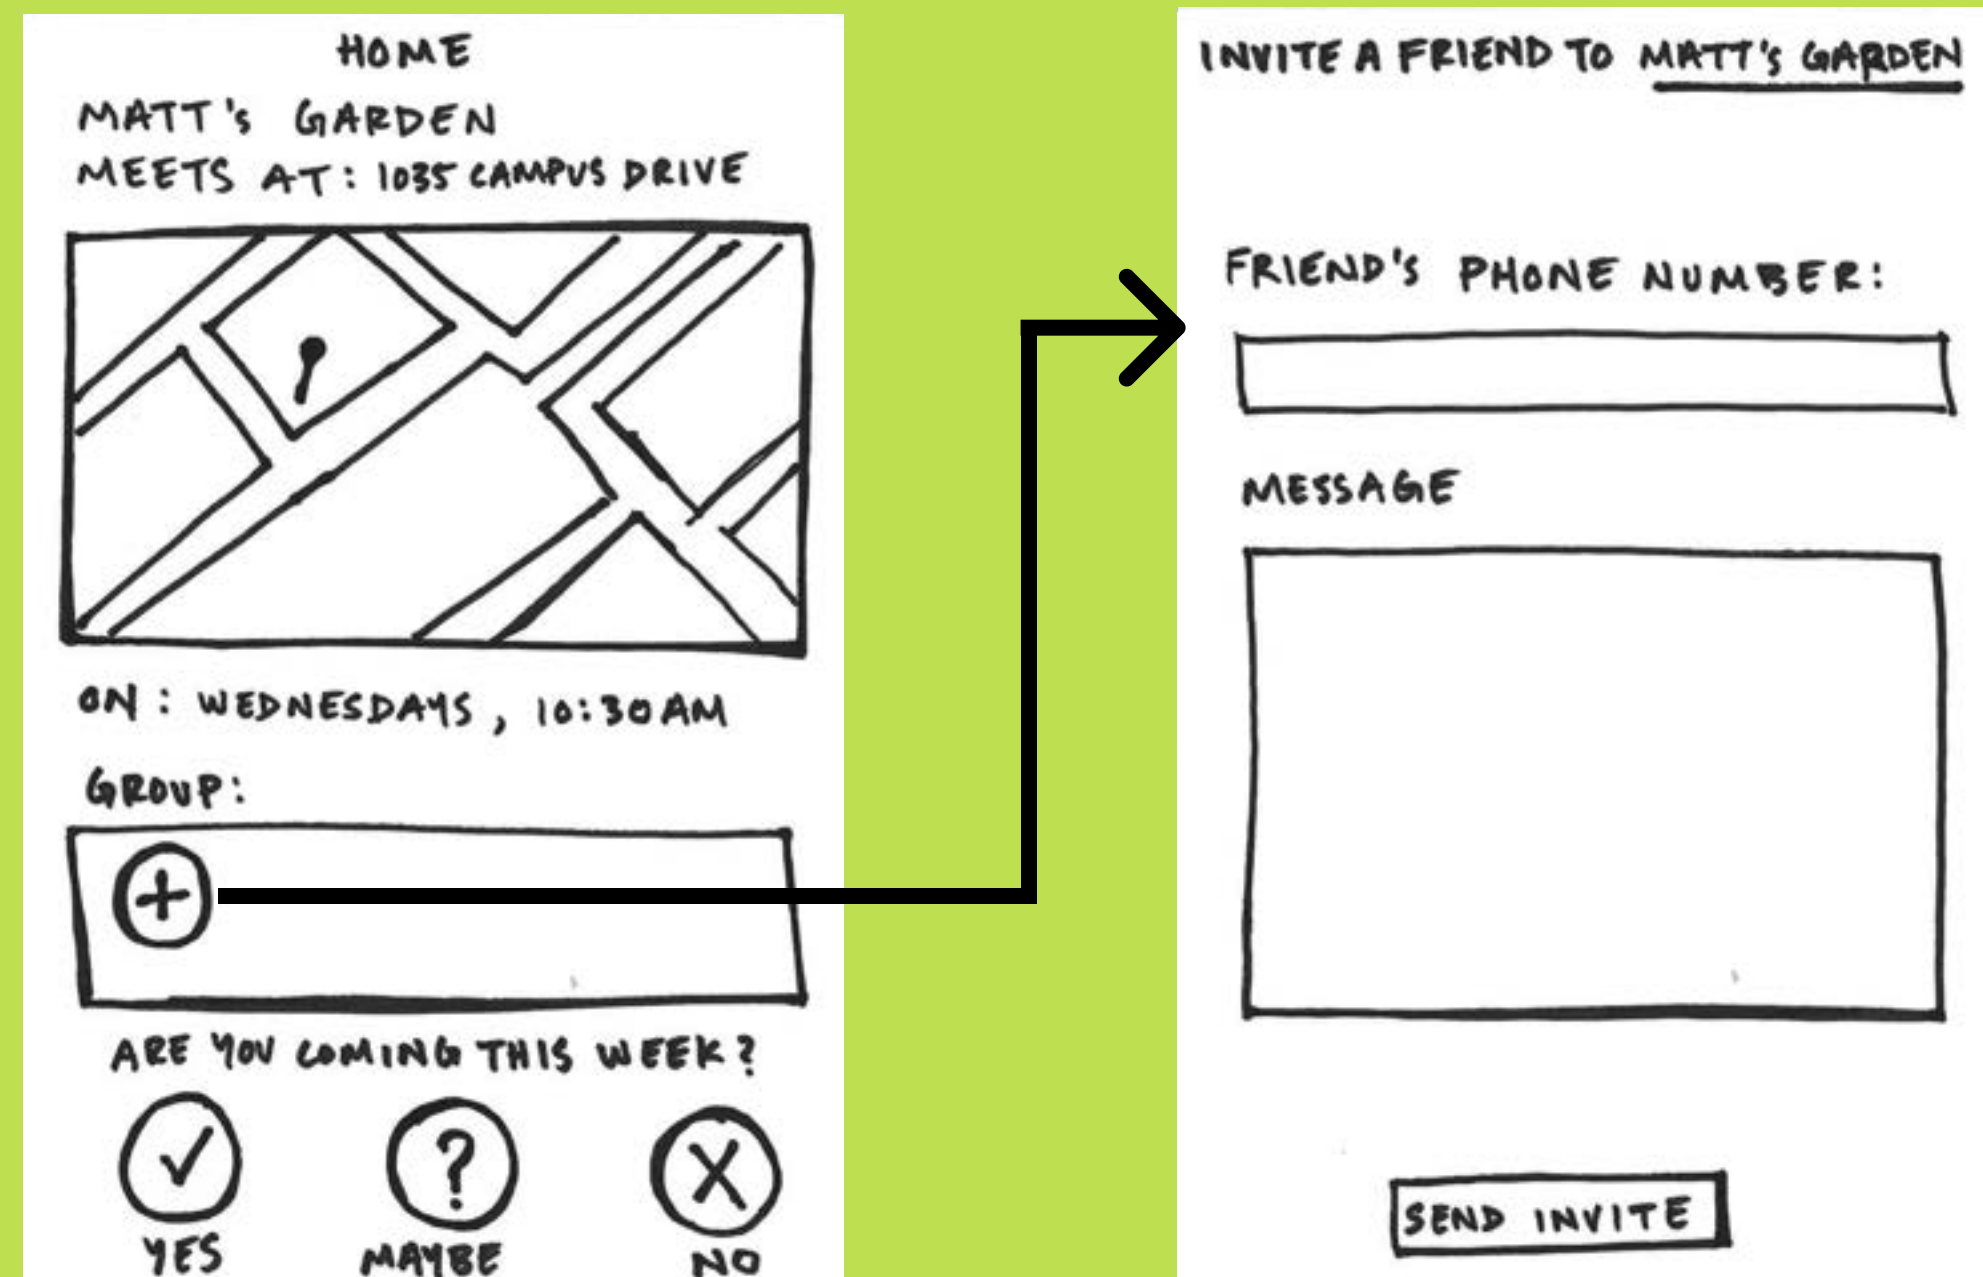

Simple Task Flow

Invite new group members

Revised LoFi Prototype

Simple Task Flow

Invite new group members

Revised LoFi Prototype

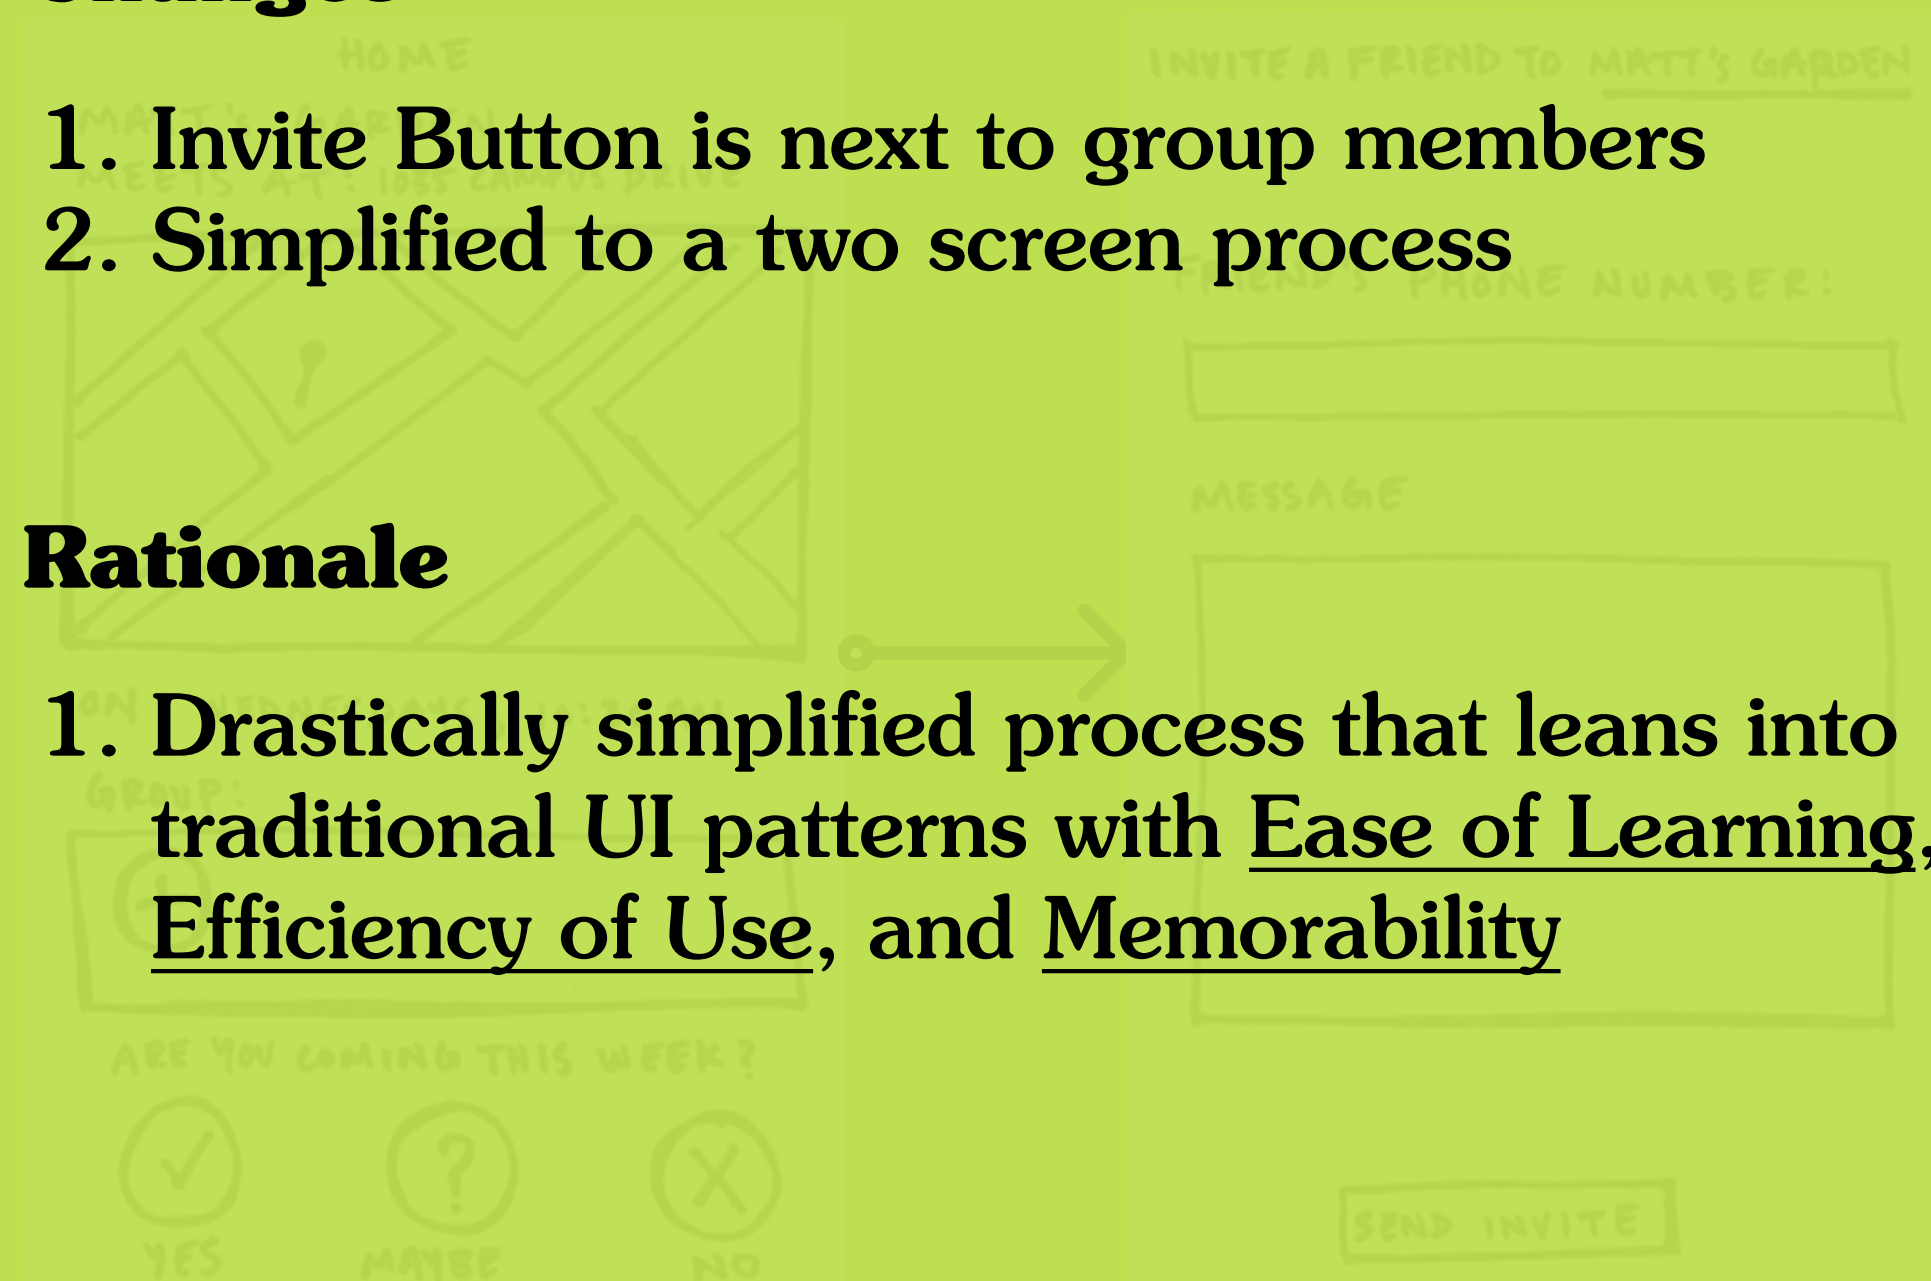

Simple Task Flow

Changes

1. Invite Button is next to group members
2. Simplified to a two screen process

Rationale

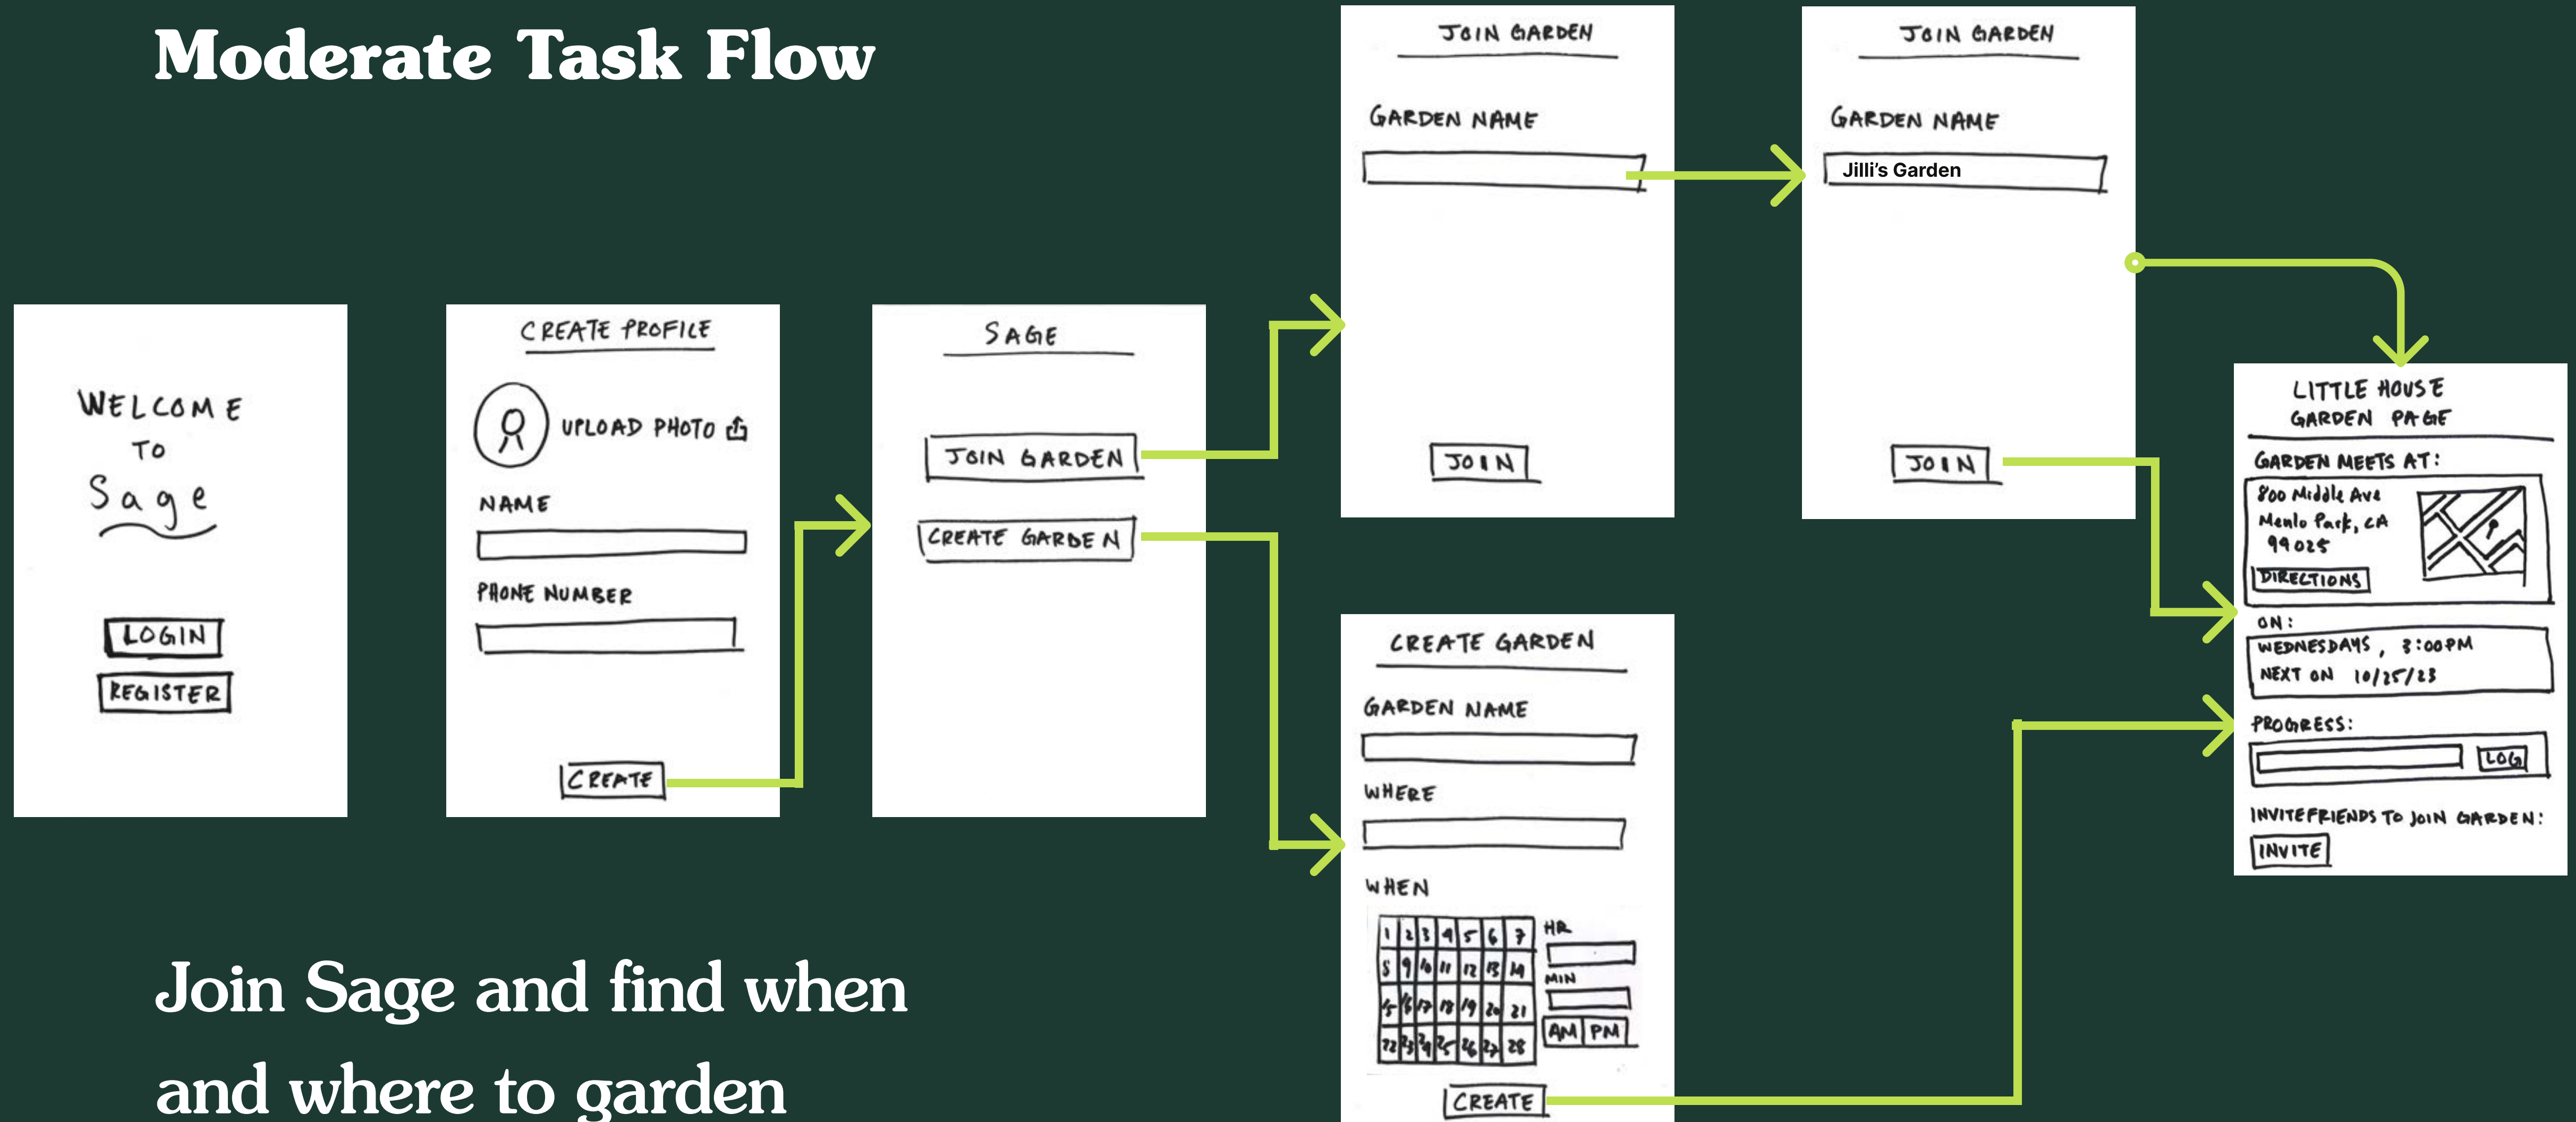

1. Drastically simplified process that leans into traditional UI patterns with Ease of Learning, Efficiency of Use, and Memorability

Invite new group members

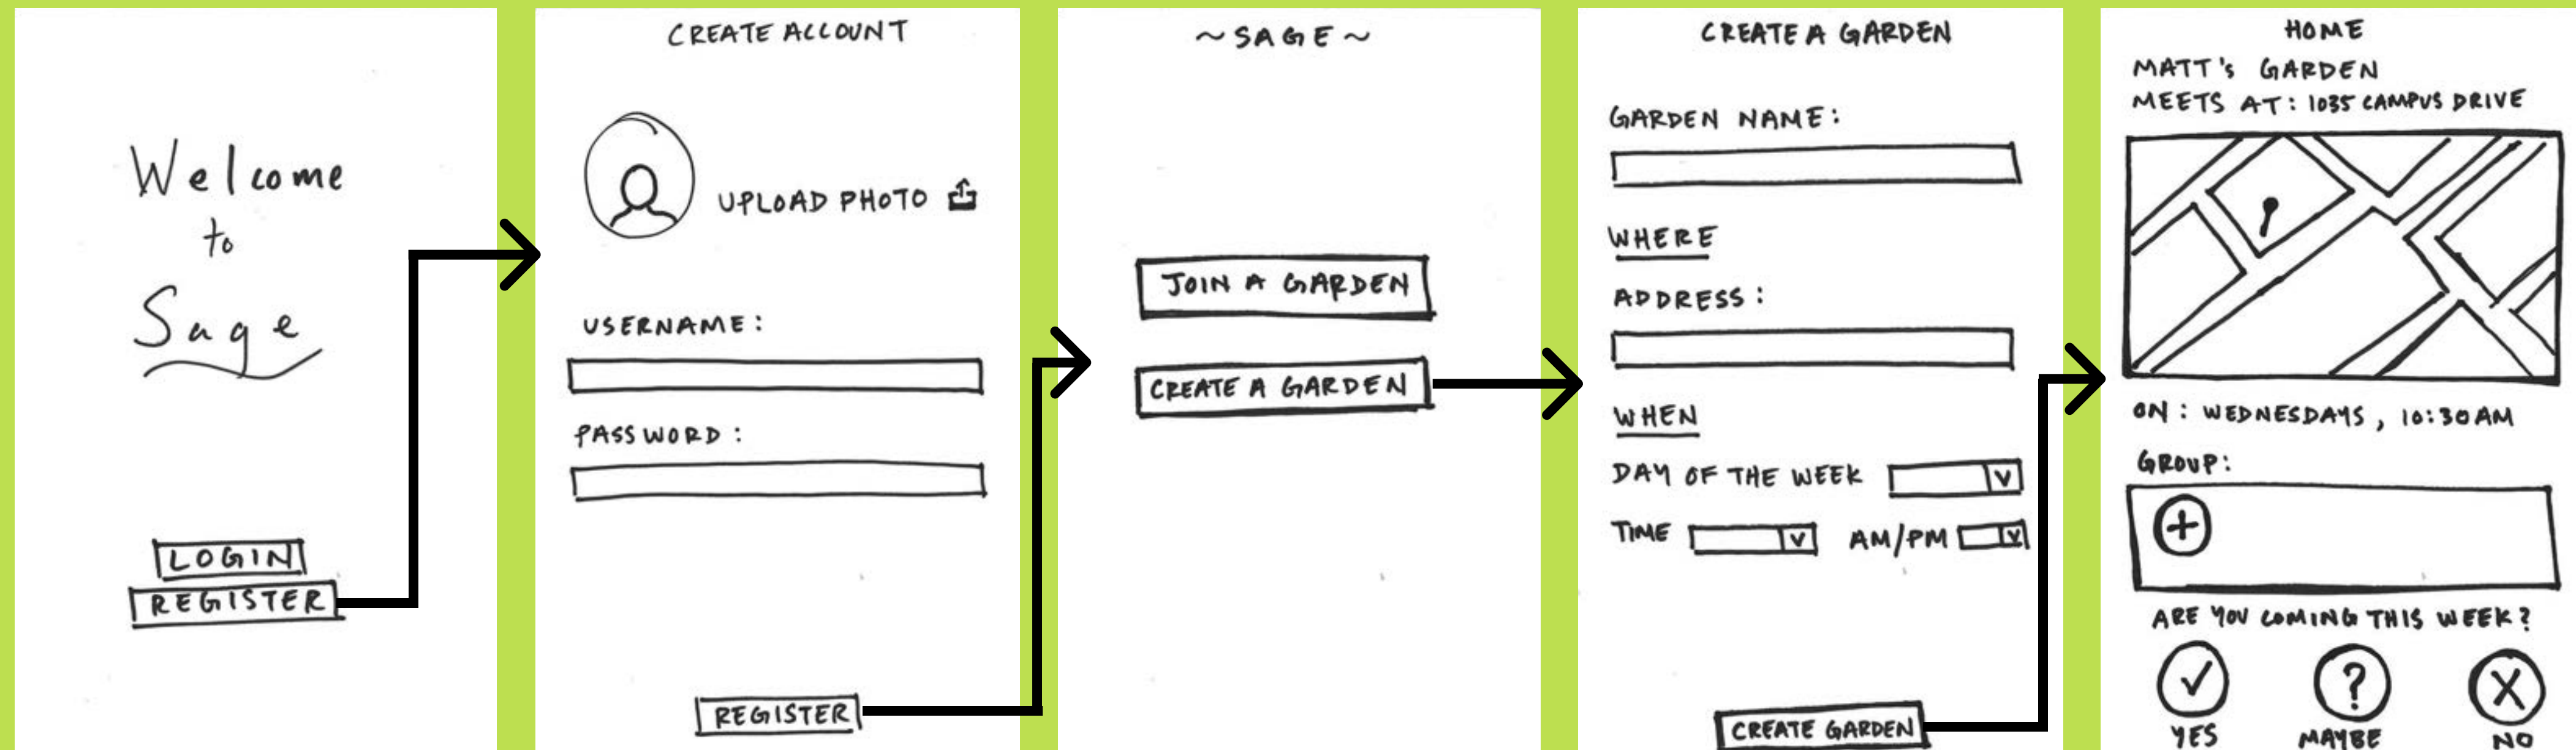

Old LoFi Prototype

Moderate Task Flow

Revised LoFi Prototype

Moderate Task Flow

Join Sage and find when
and where to garden

Revised LoFi Prototype

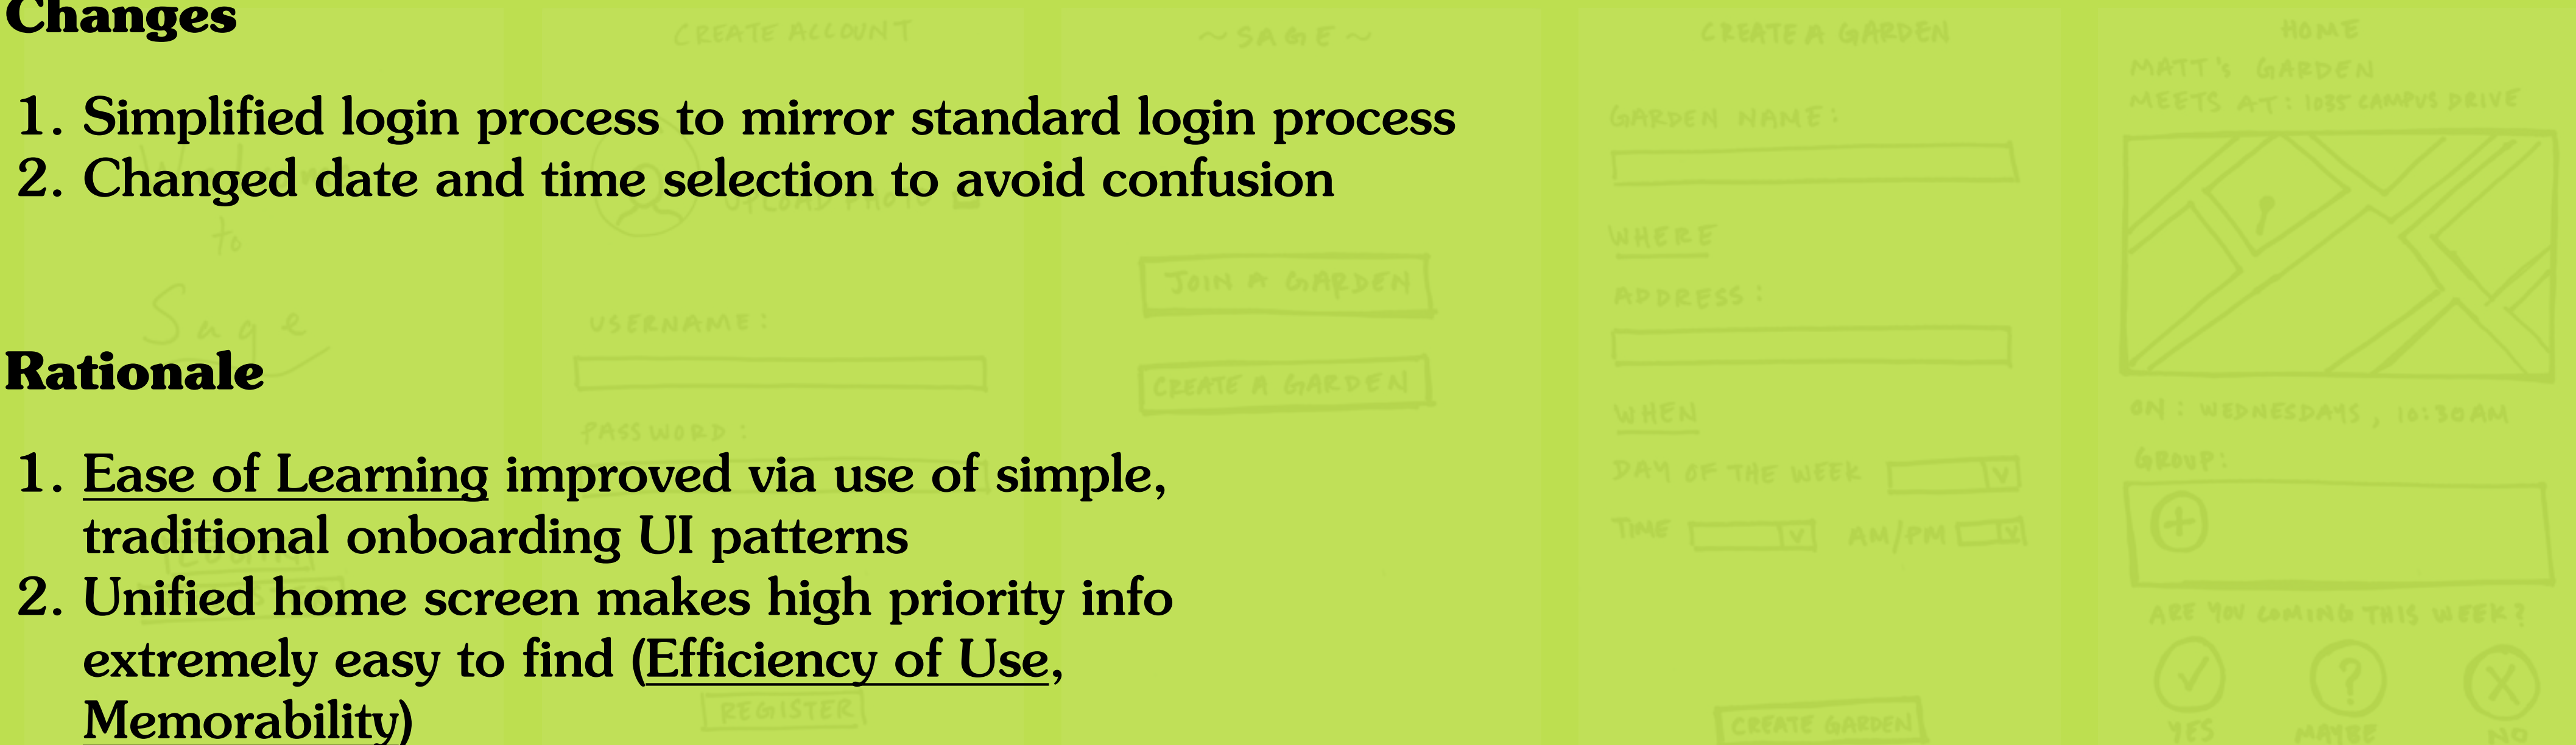

Moderate Task Flow

Changes

1. Simplified login process to mirror standard login process
2. Changed date and time selection to avoid confusion

Rationale

1. Ease of Learning improved via use of simple, traditional onboarding UI patterns
2. Unified home screen makes high priority info extremely easy to find (Efficiency of Use, Memorability)

Join Sage and find when
and where to garden

LoFi Prototype

Complex Task Flow

Distribute harvested food to the community

Resvised LoFi Prototype

Complex

Matt's Phone

Matt's Phone

Ethan's Phone

Let your group members
know that “I miss you ❤️”

Revised LoFi Prototype

Complex Changes

1. Changes complex task flow from harvest to check-in
2. Consolidated information to home page for simplicity
3. Call to action to check in with absent members

Rationale

1. Ease of Learning improved given that harvest functionality not intuitive, attendance more comprehensive
2. Unified home screen makes high priority info extremely easy to find (Efficiency of Use, Memorability)
3. Error Rate and Severity lowered given fewer screens should invite fewer errors
4. Satisfaction increased given group member section requested

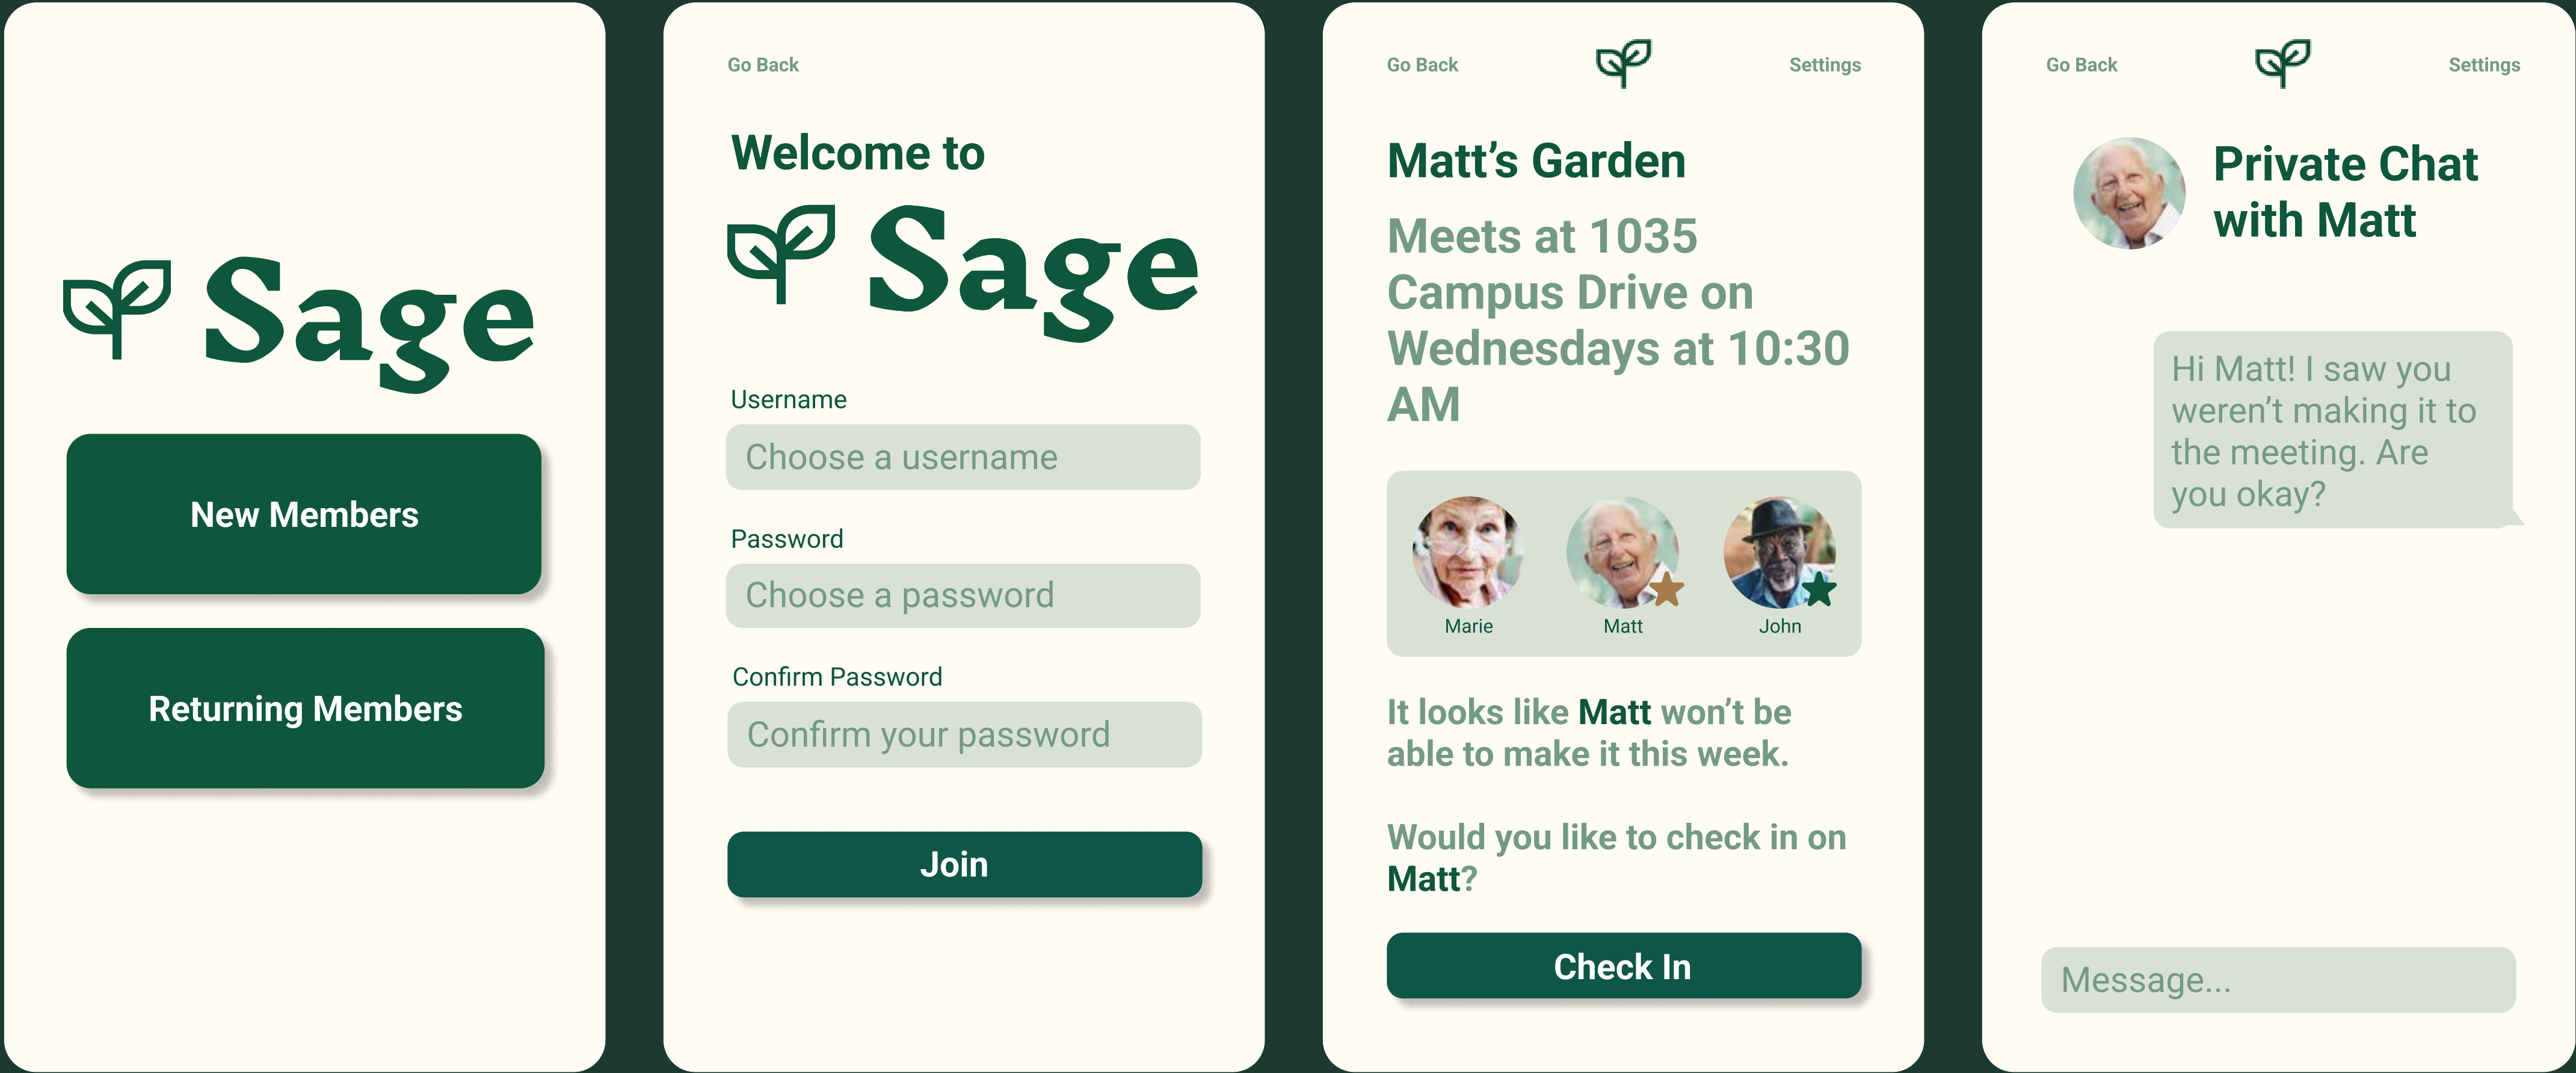

Let your group members

know that “I miss you ❤️”

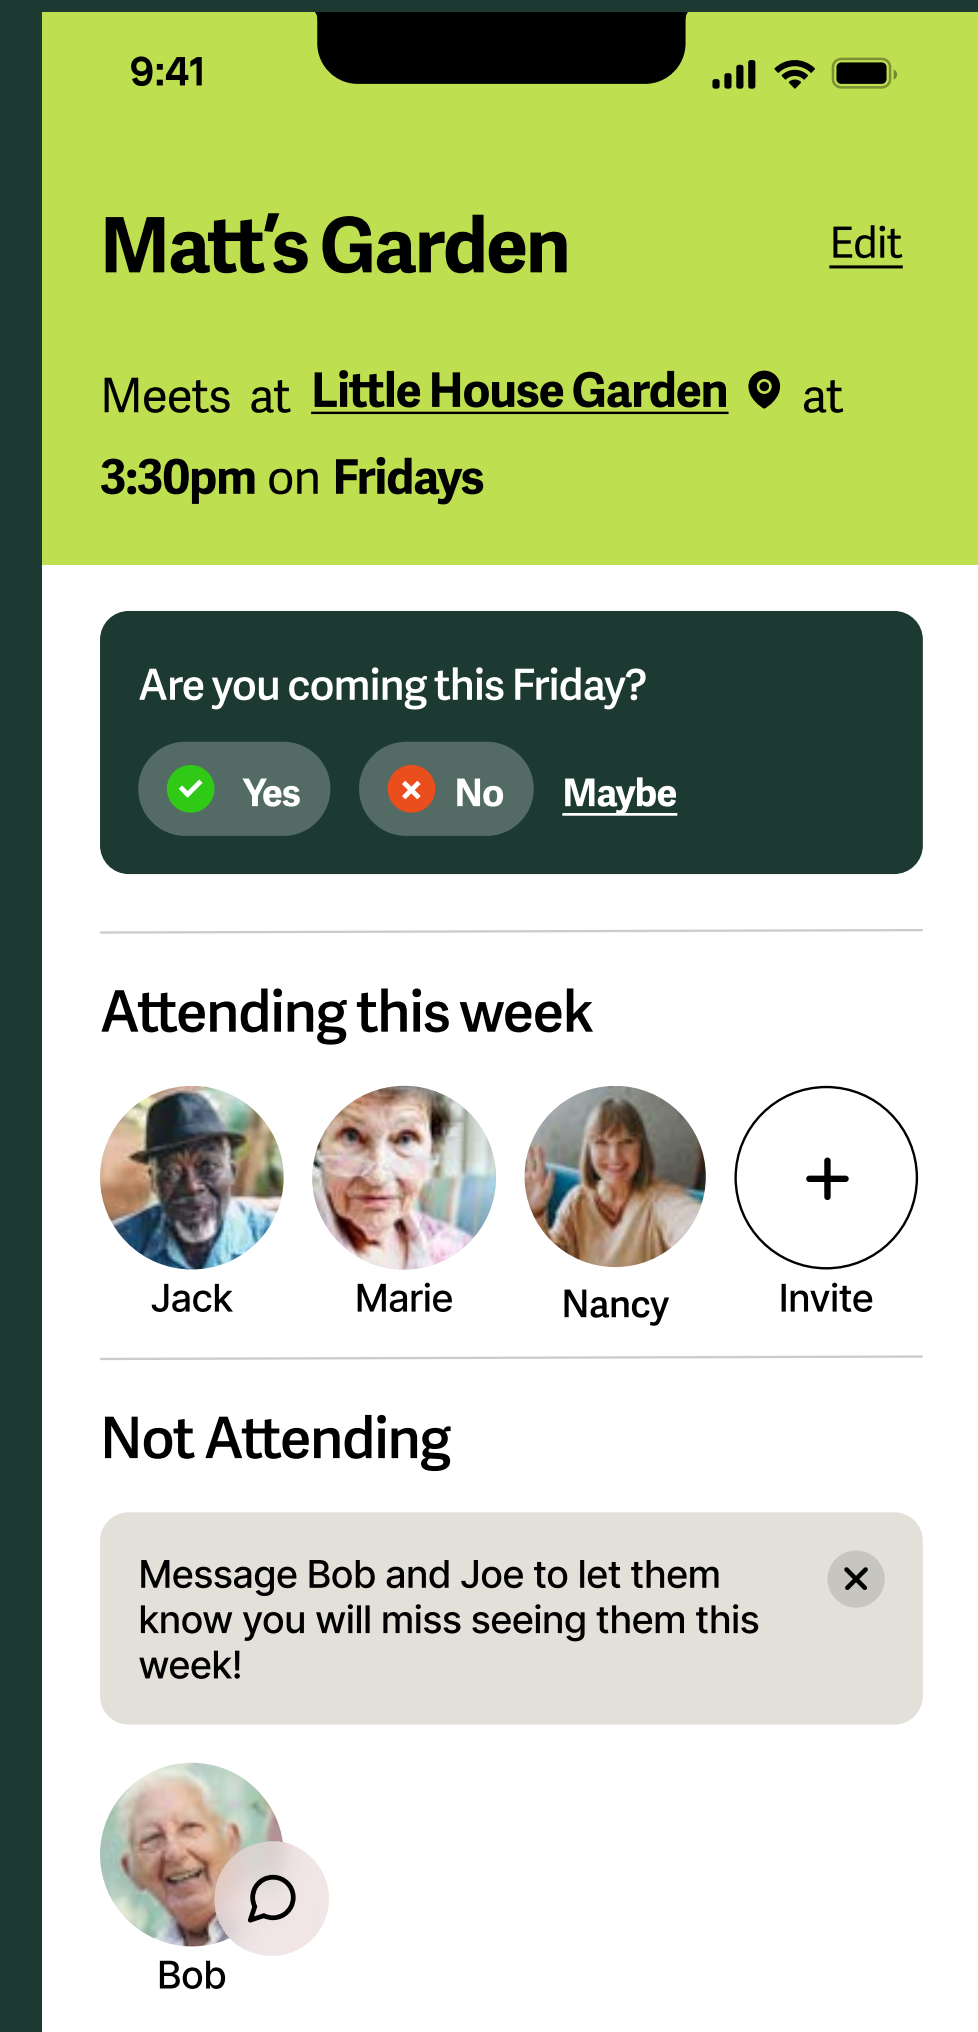

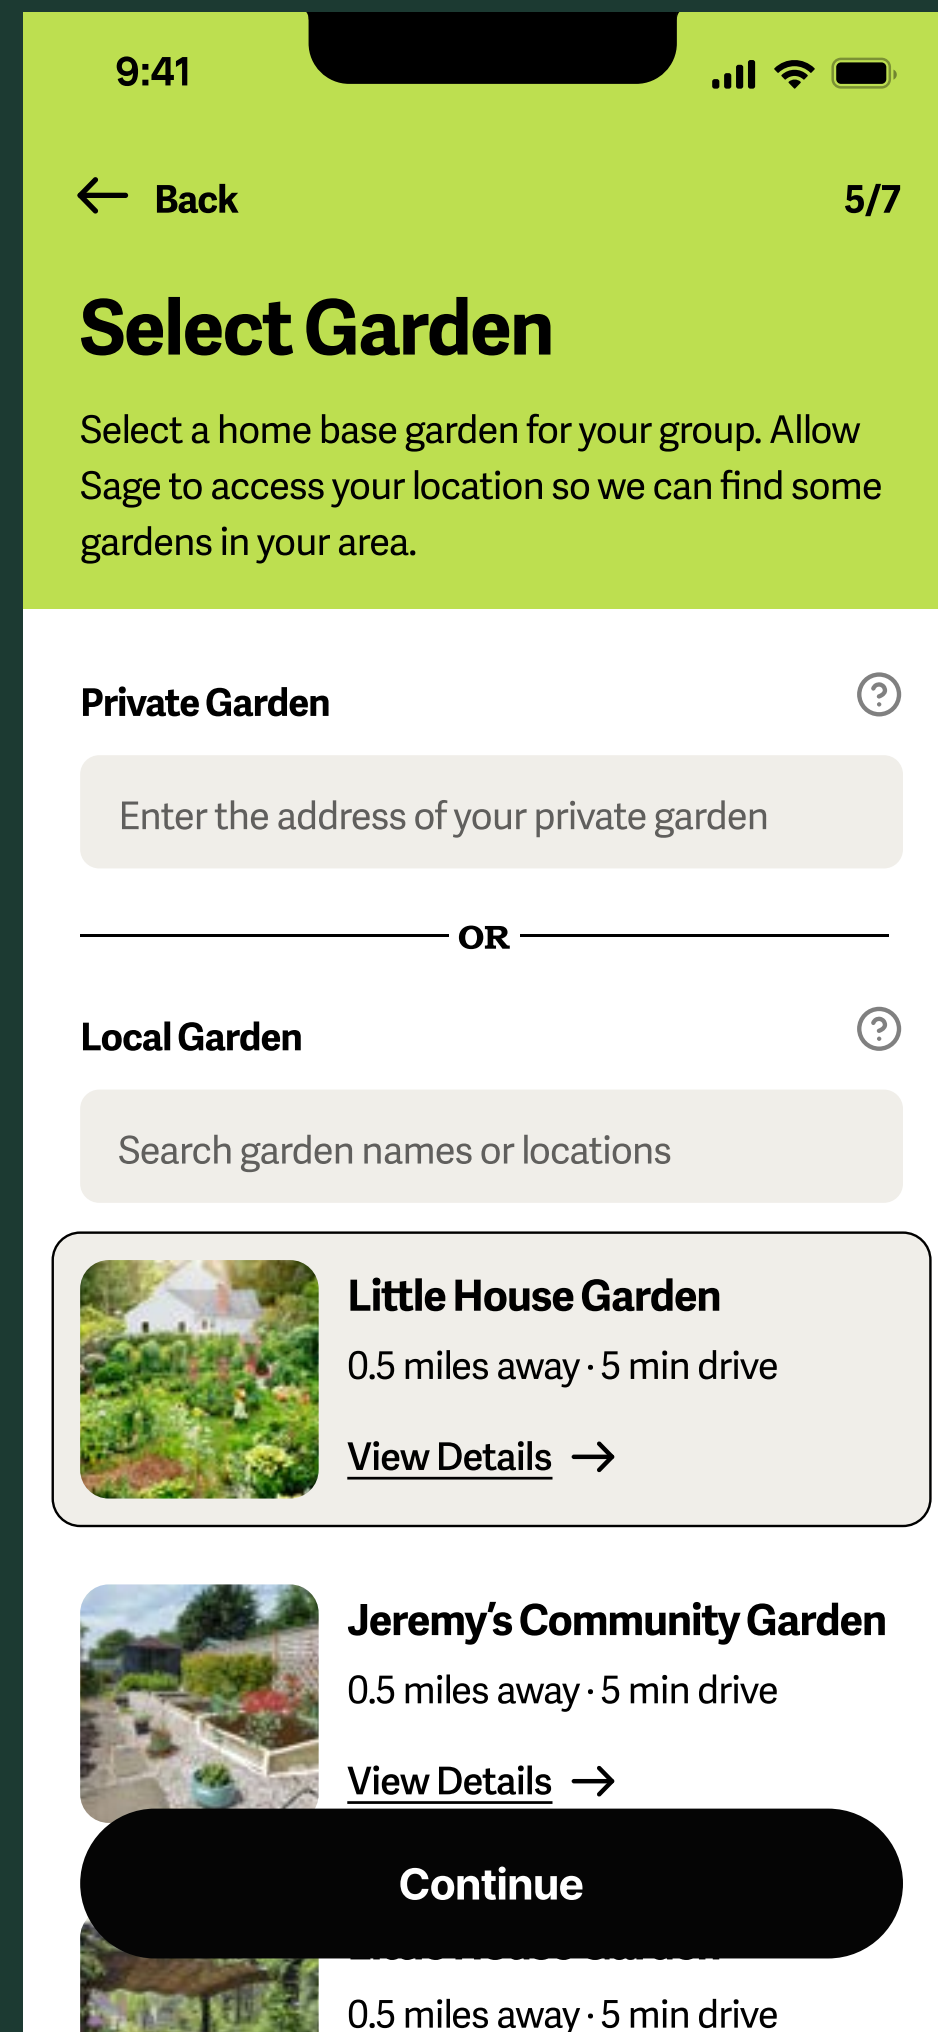

Med-Fi Prototype

MedFi Prototype Before Feedback

MedFi Prototype After Feedback

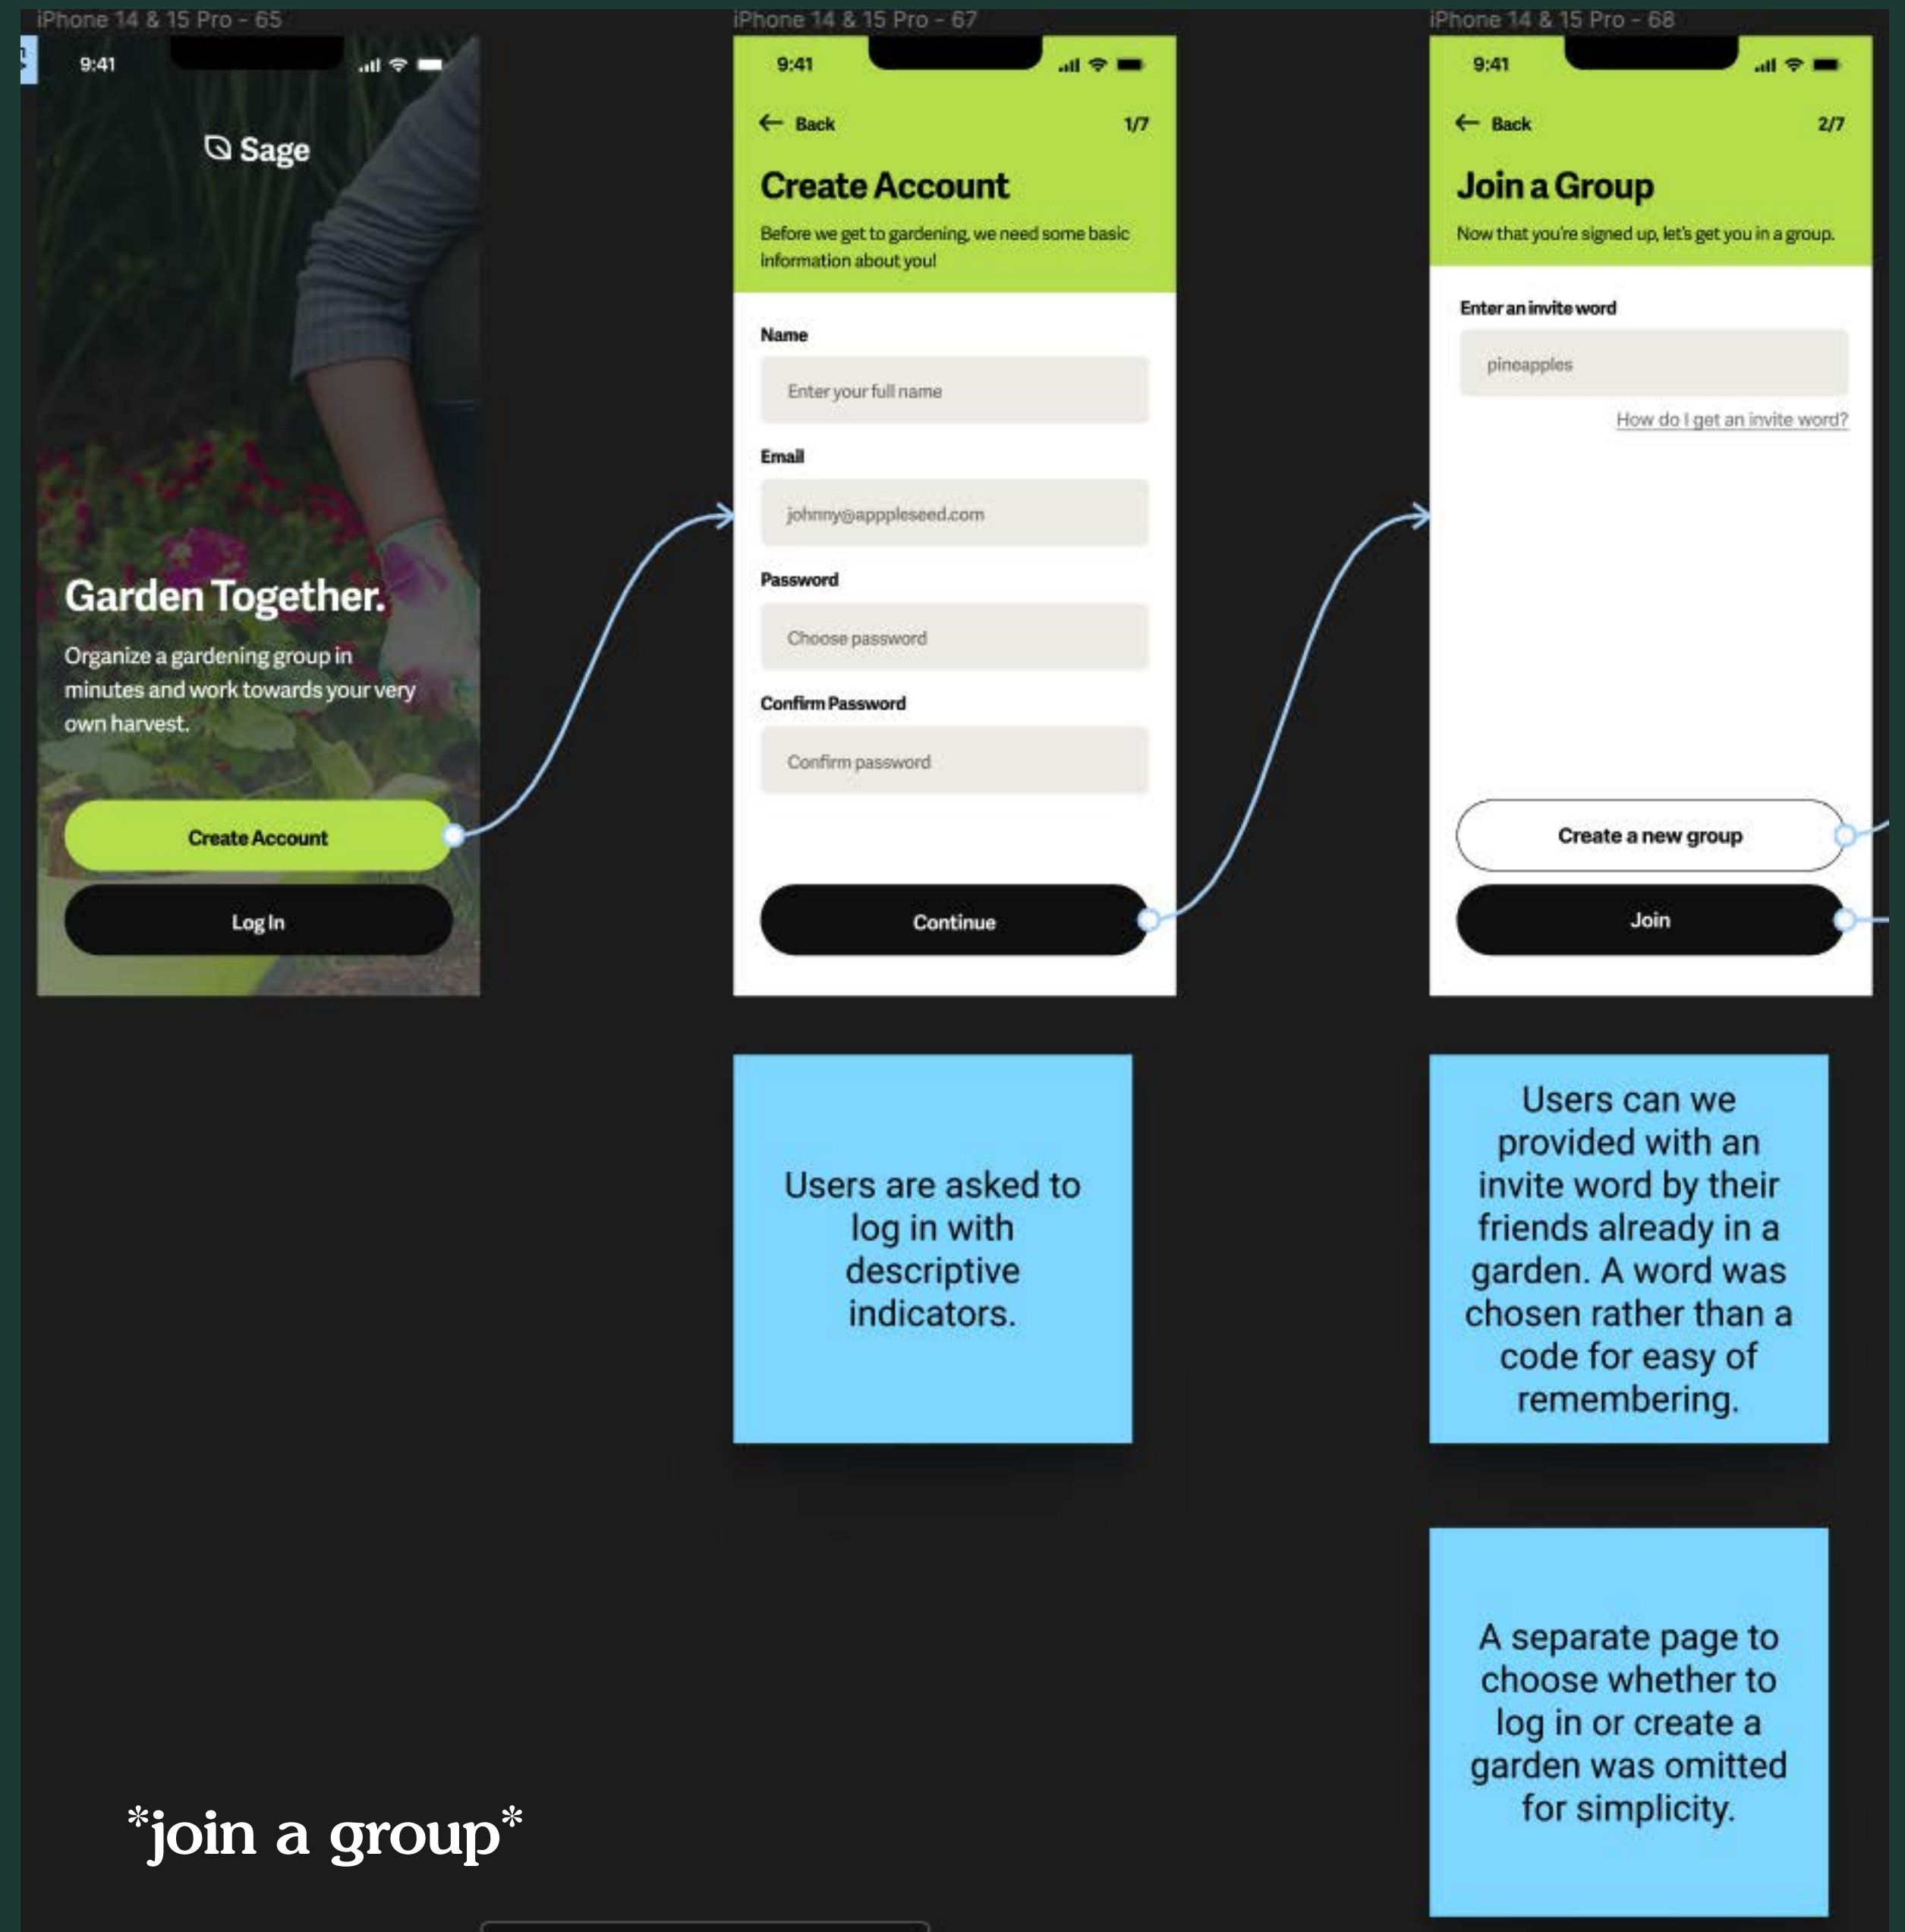

MedFi Prototype After Feedback

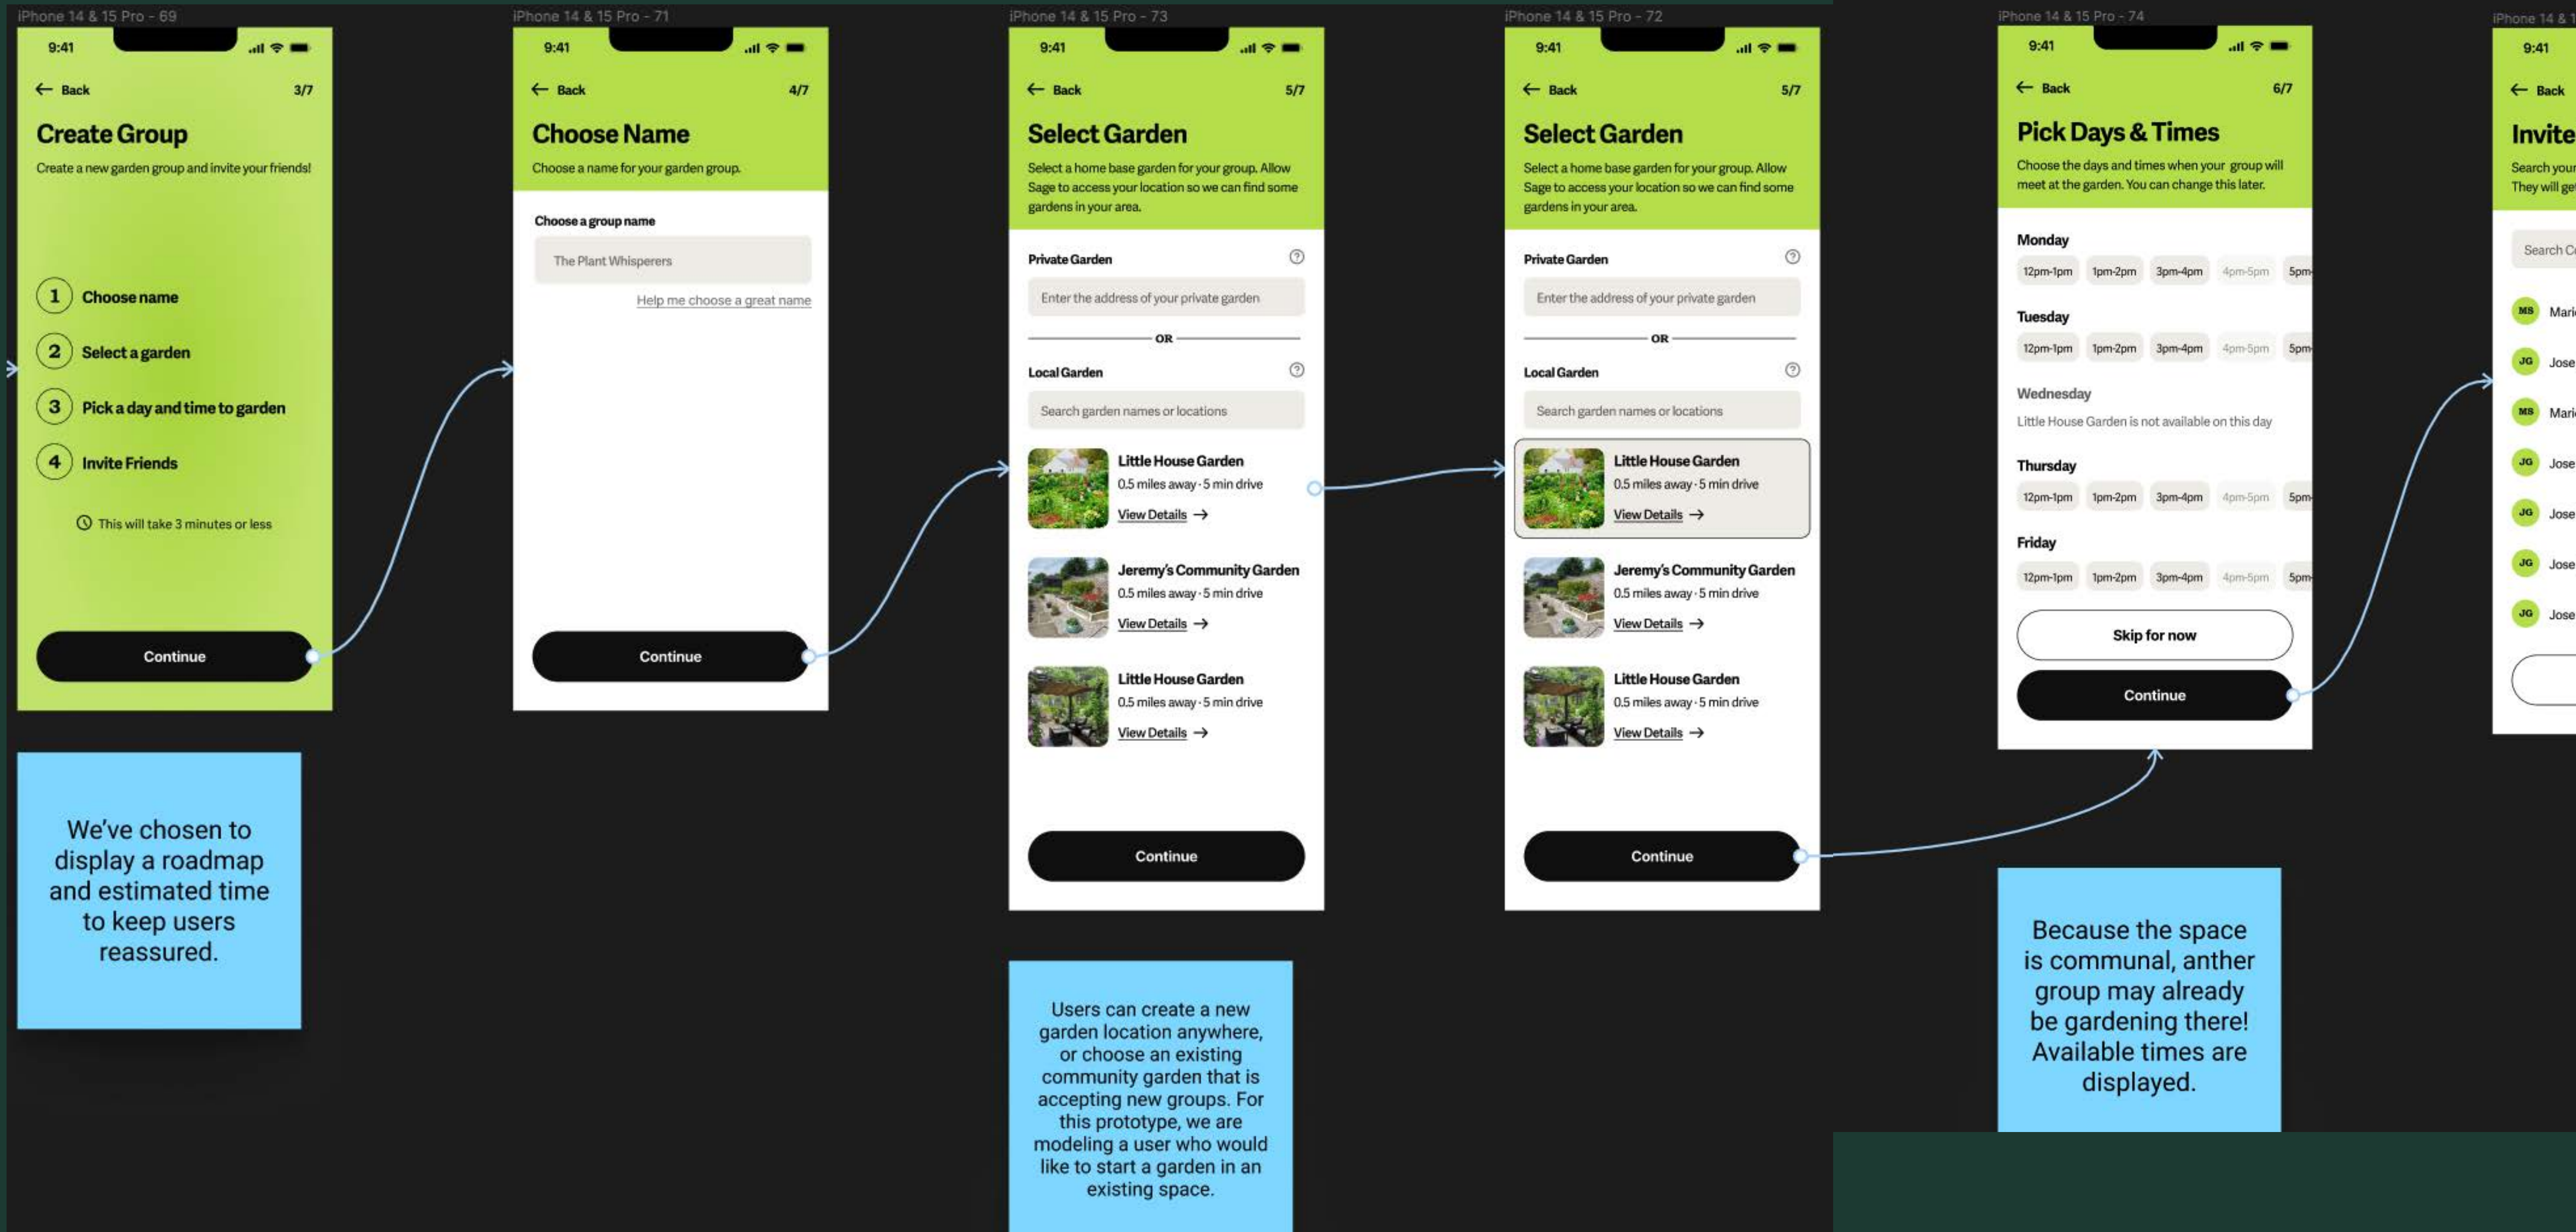

Main Changes	Usability Progress
Traditional UI	Ease of Learning & Efficiency
High contrast color choices	Accessibility
Use of typography, colors, and UI blocking to prioritize information	Memorability and Accessibility

Moderate Task Flow

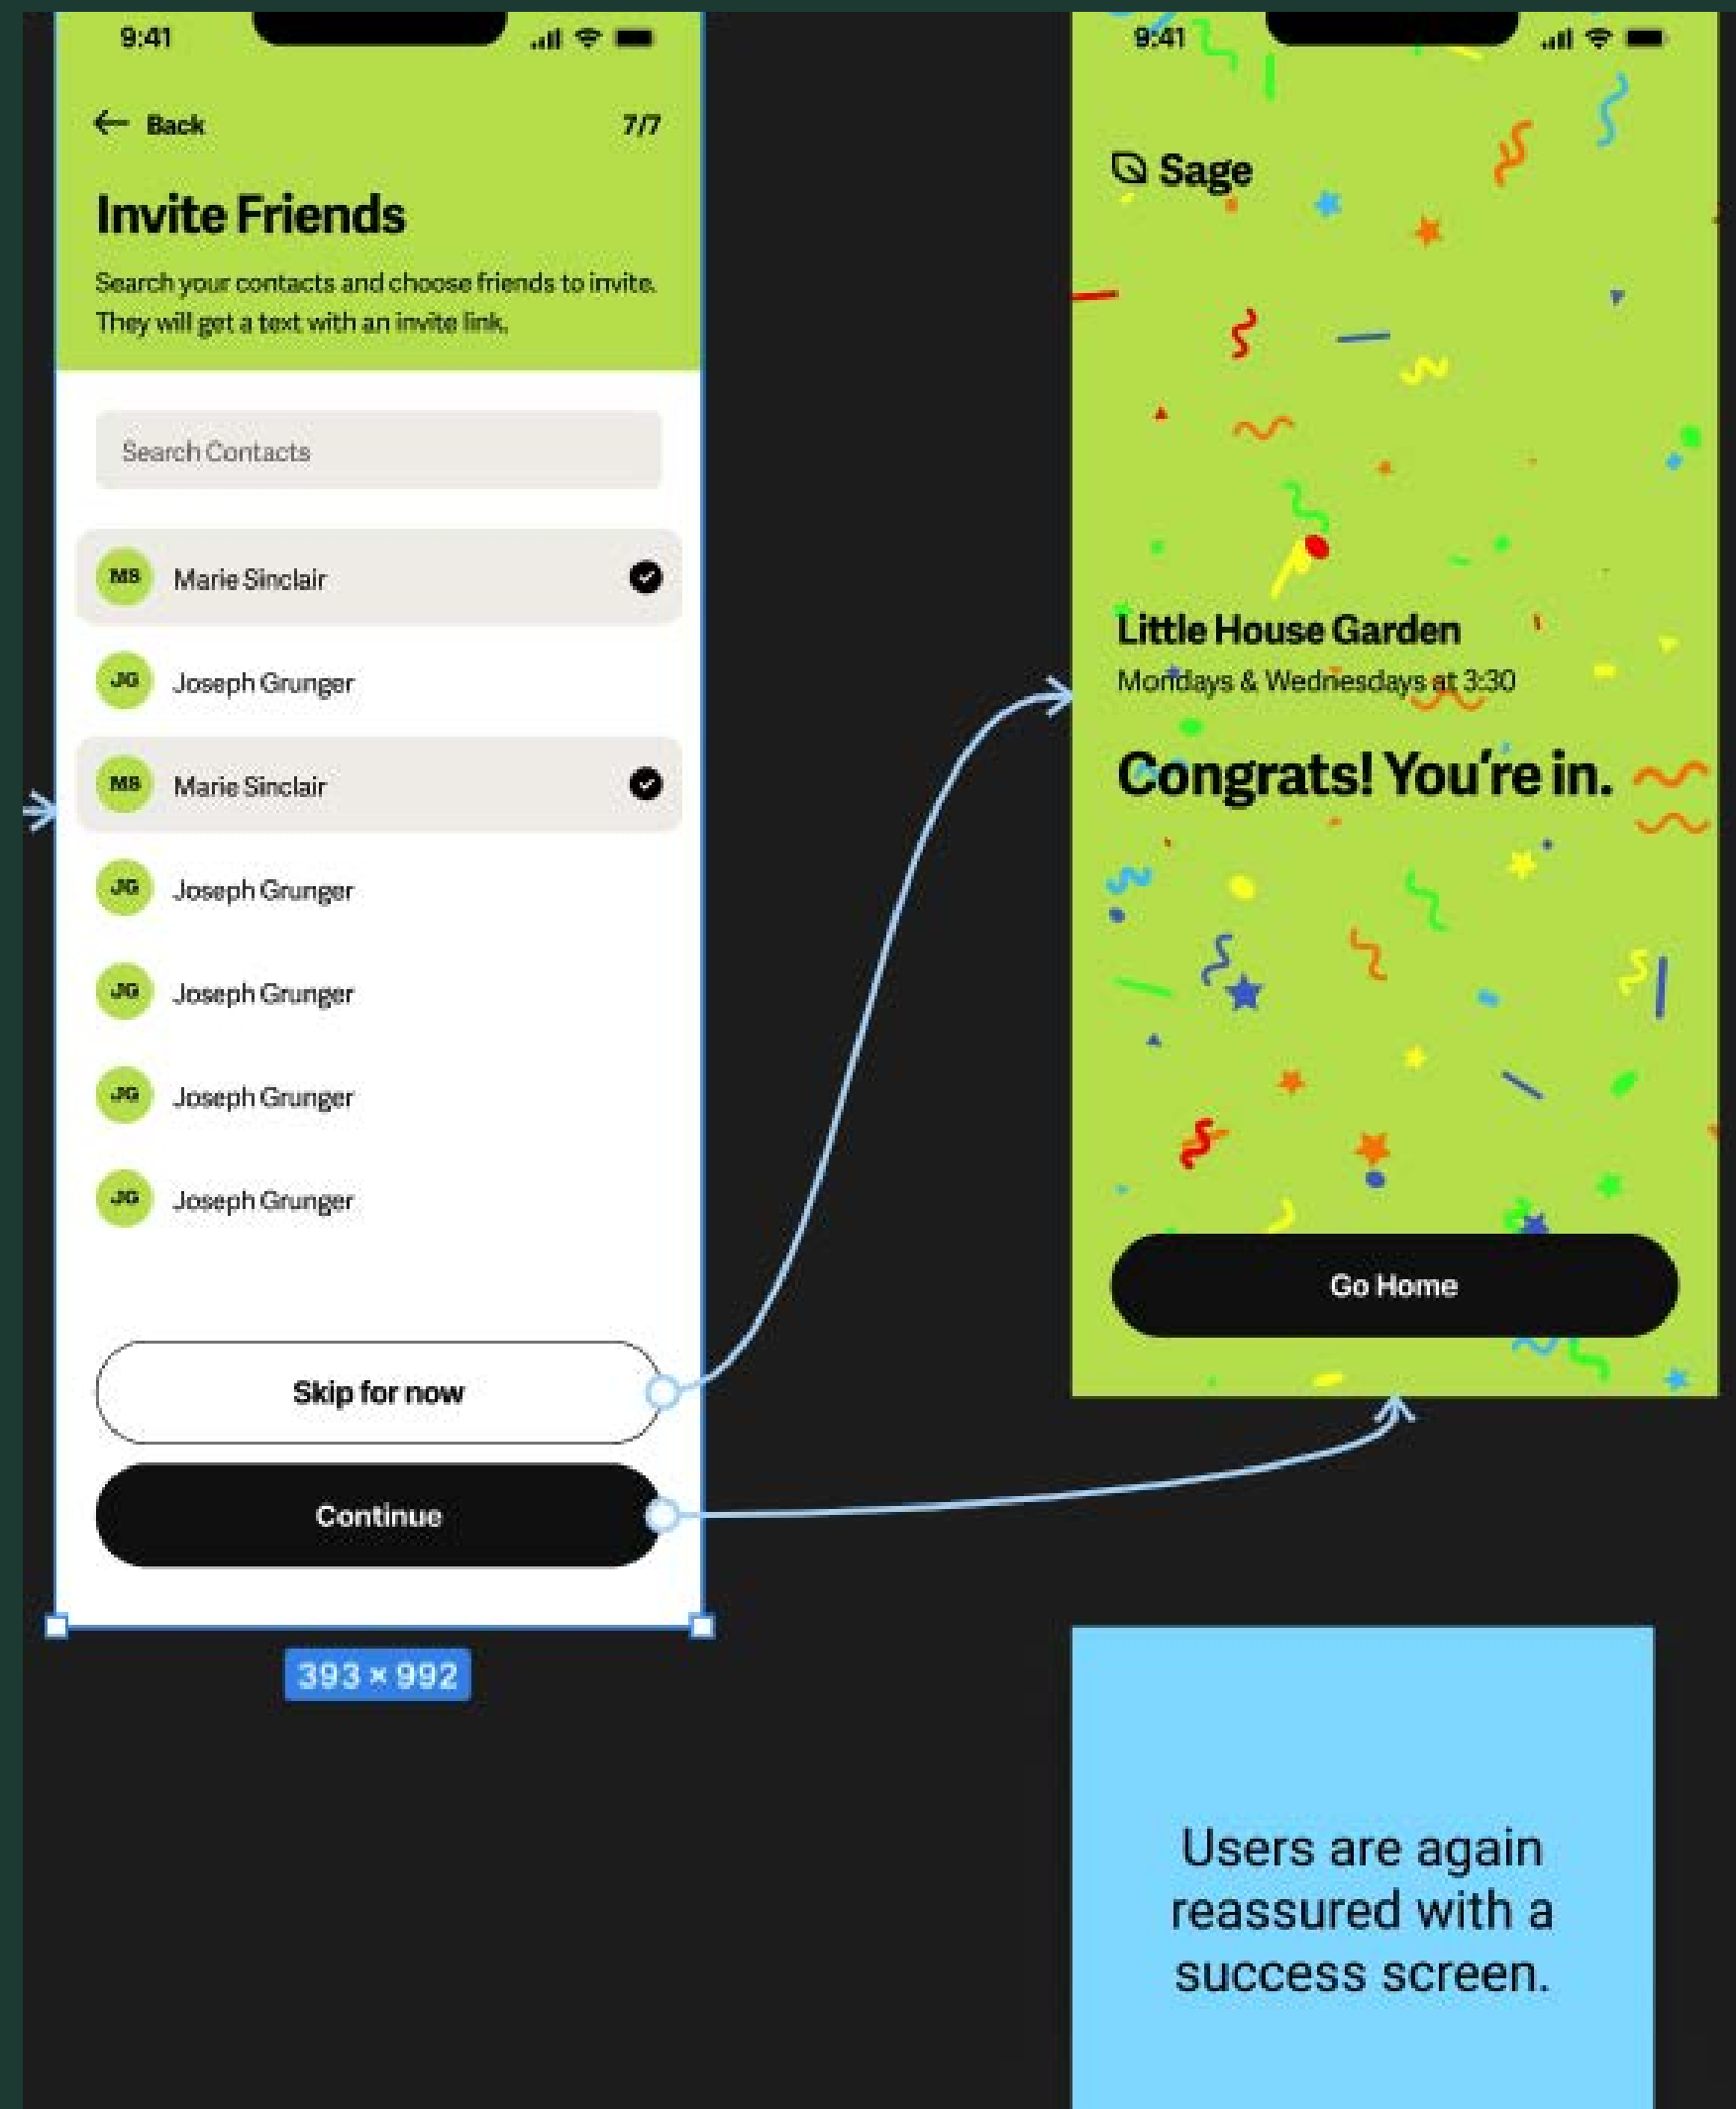

Join Sage and find out
when and where to
garden

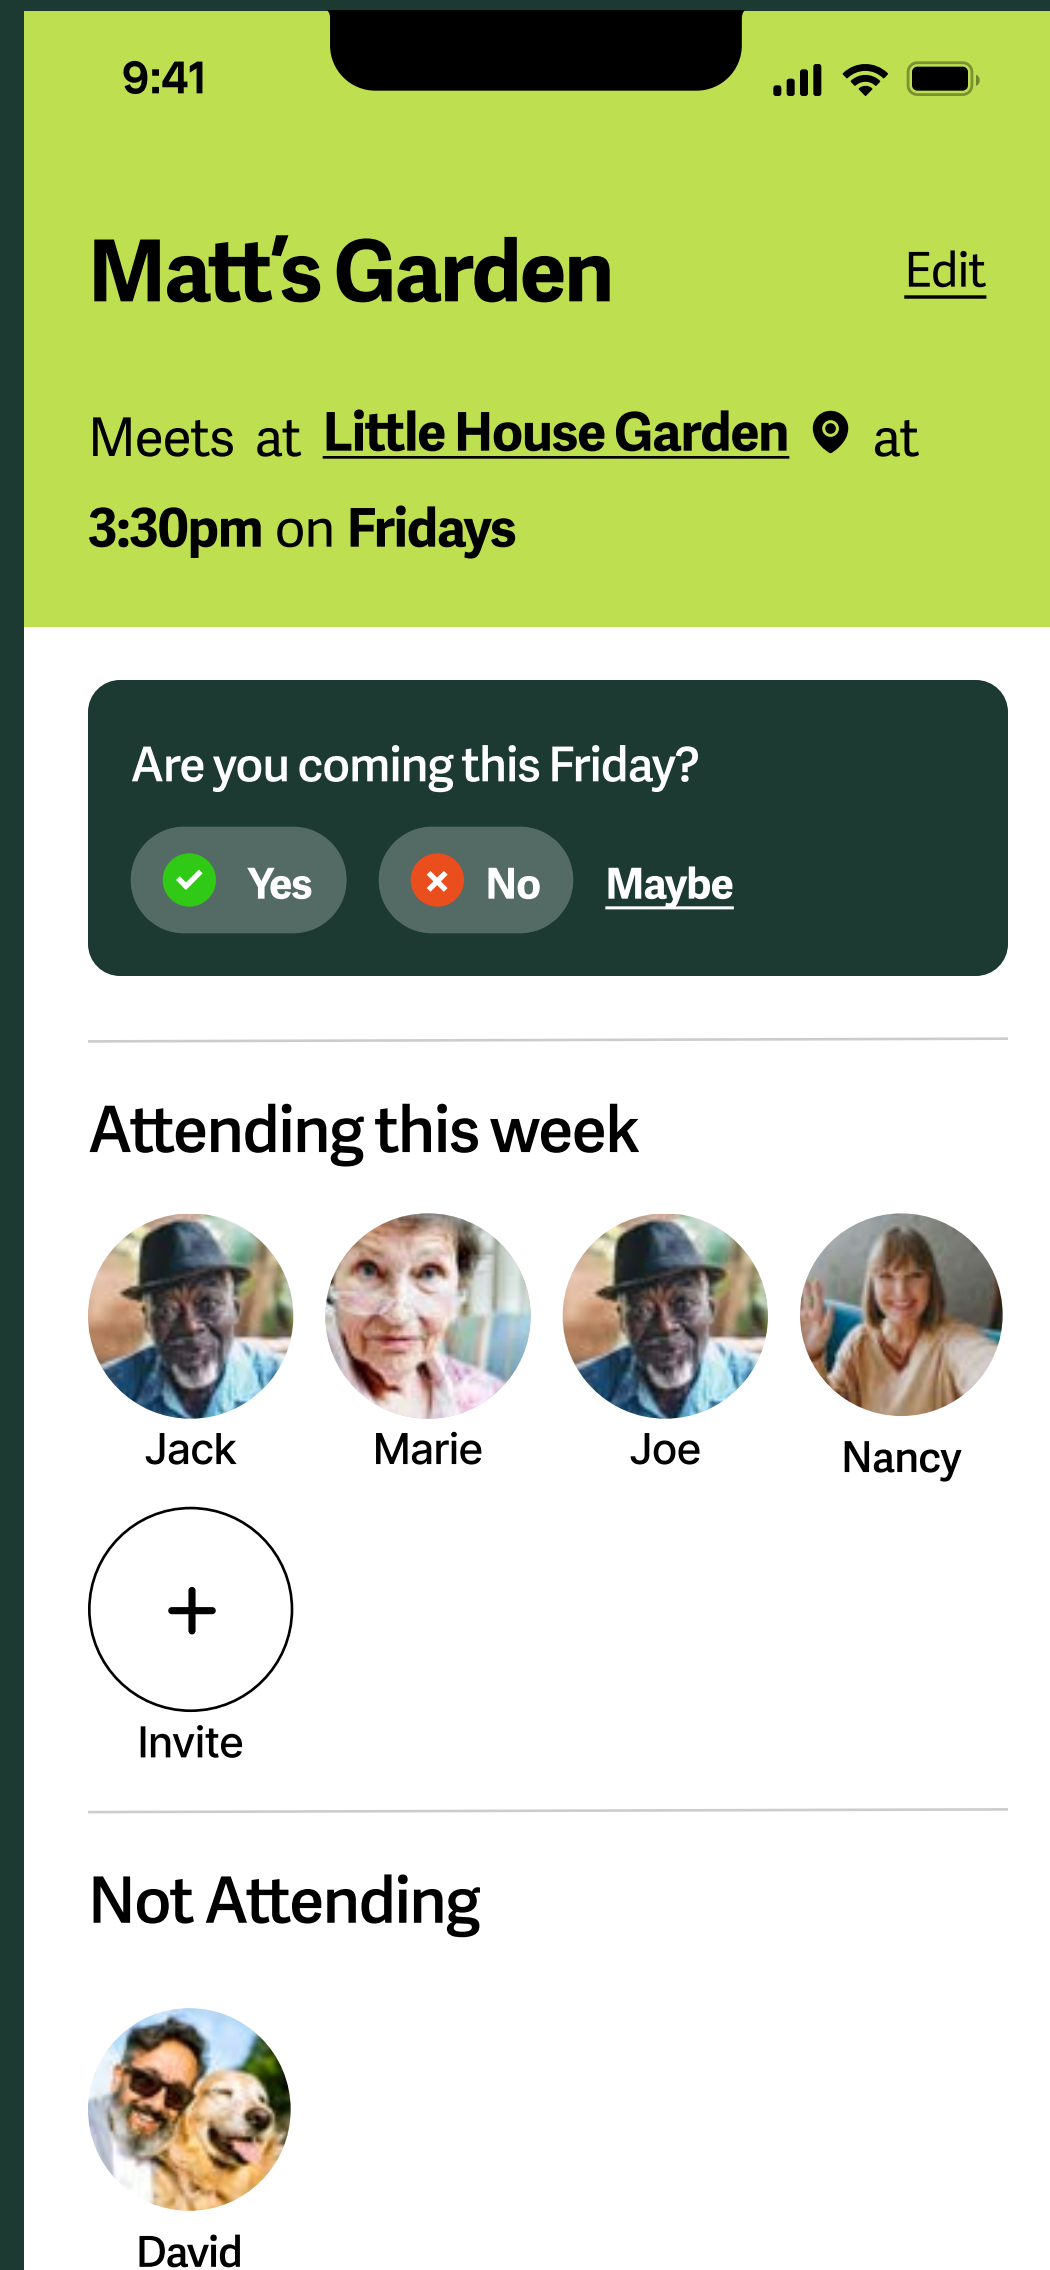

create a group

create a group

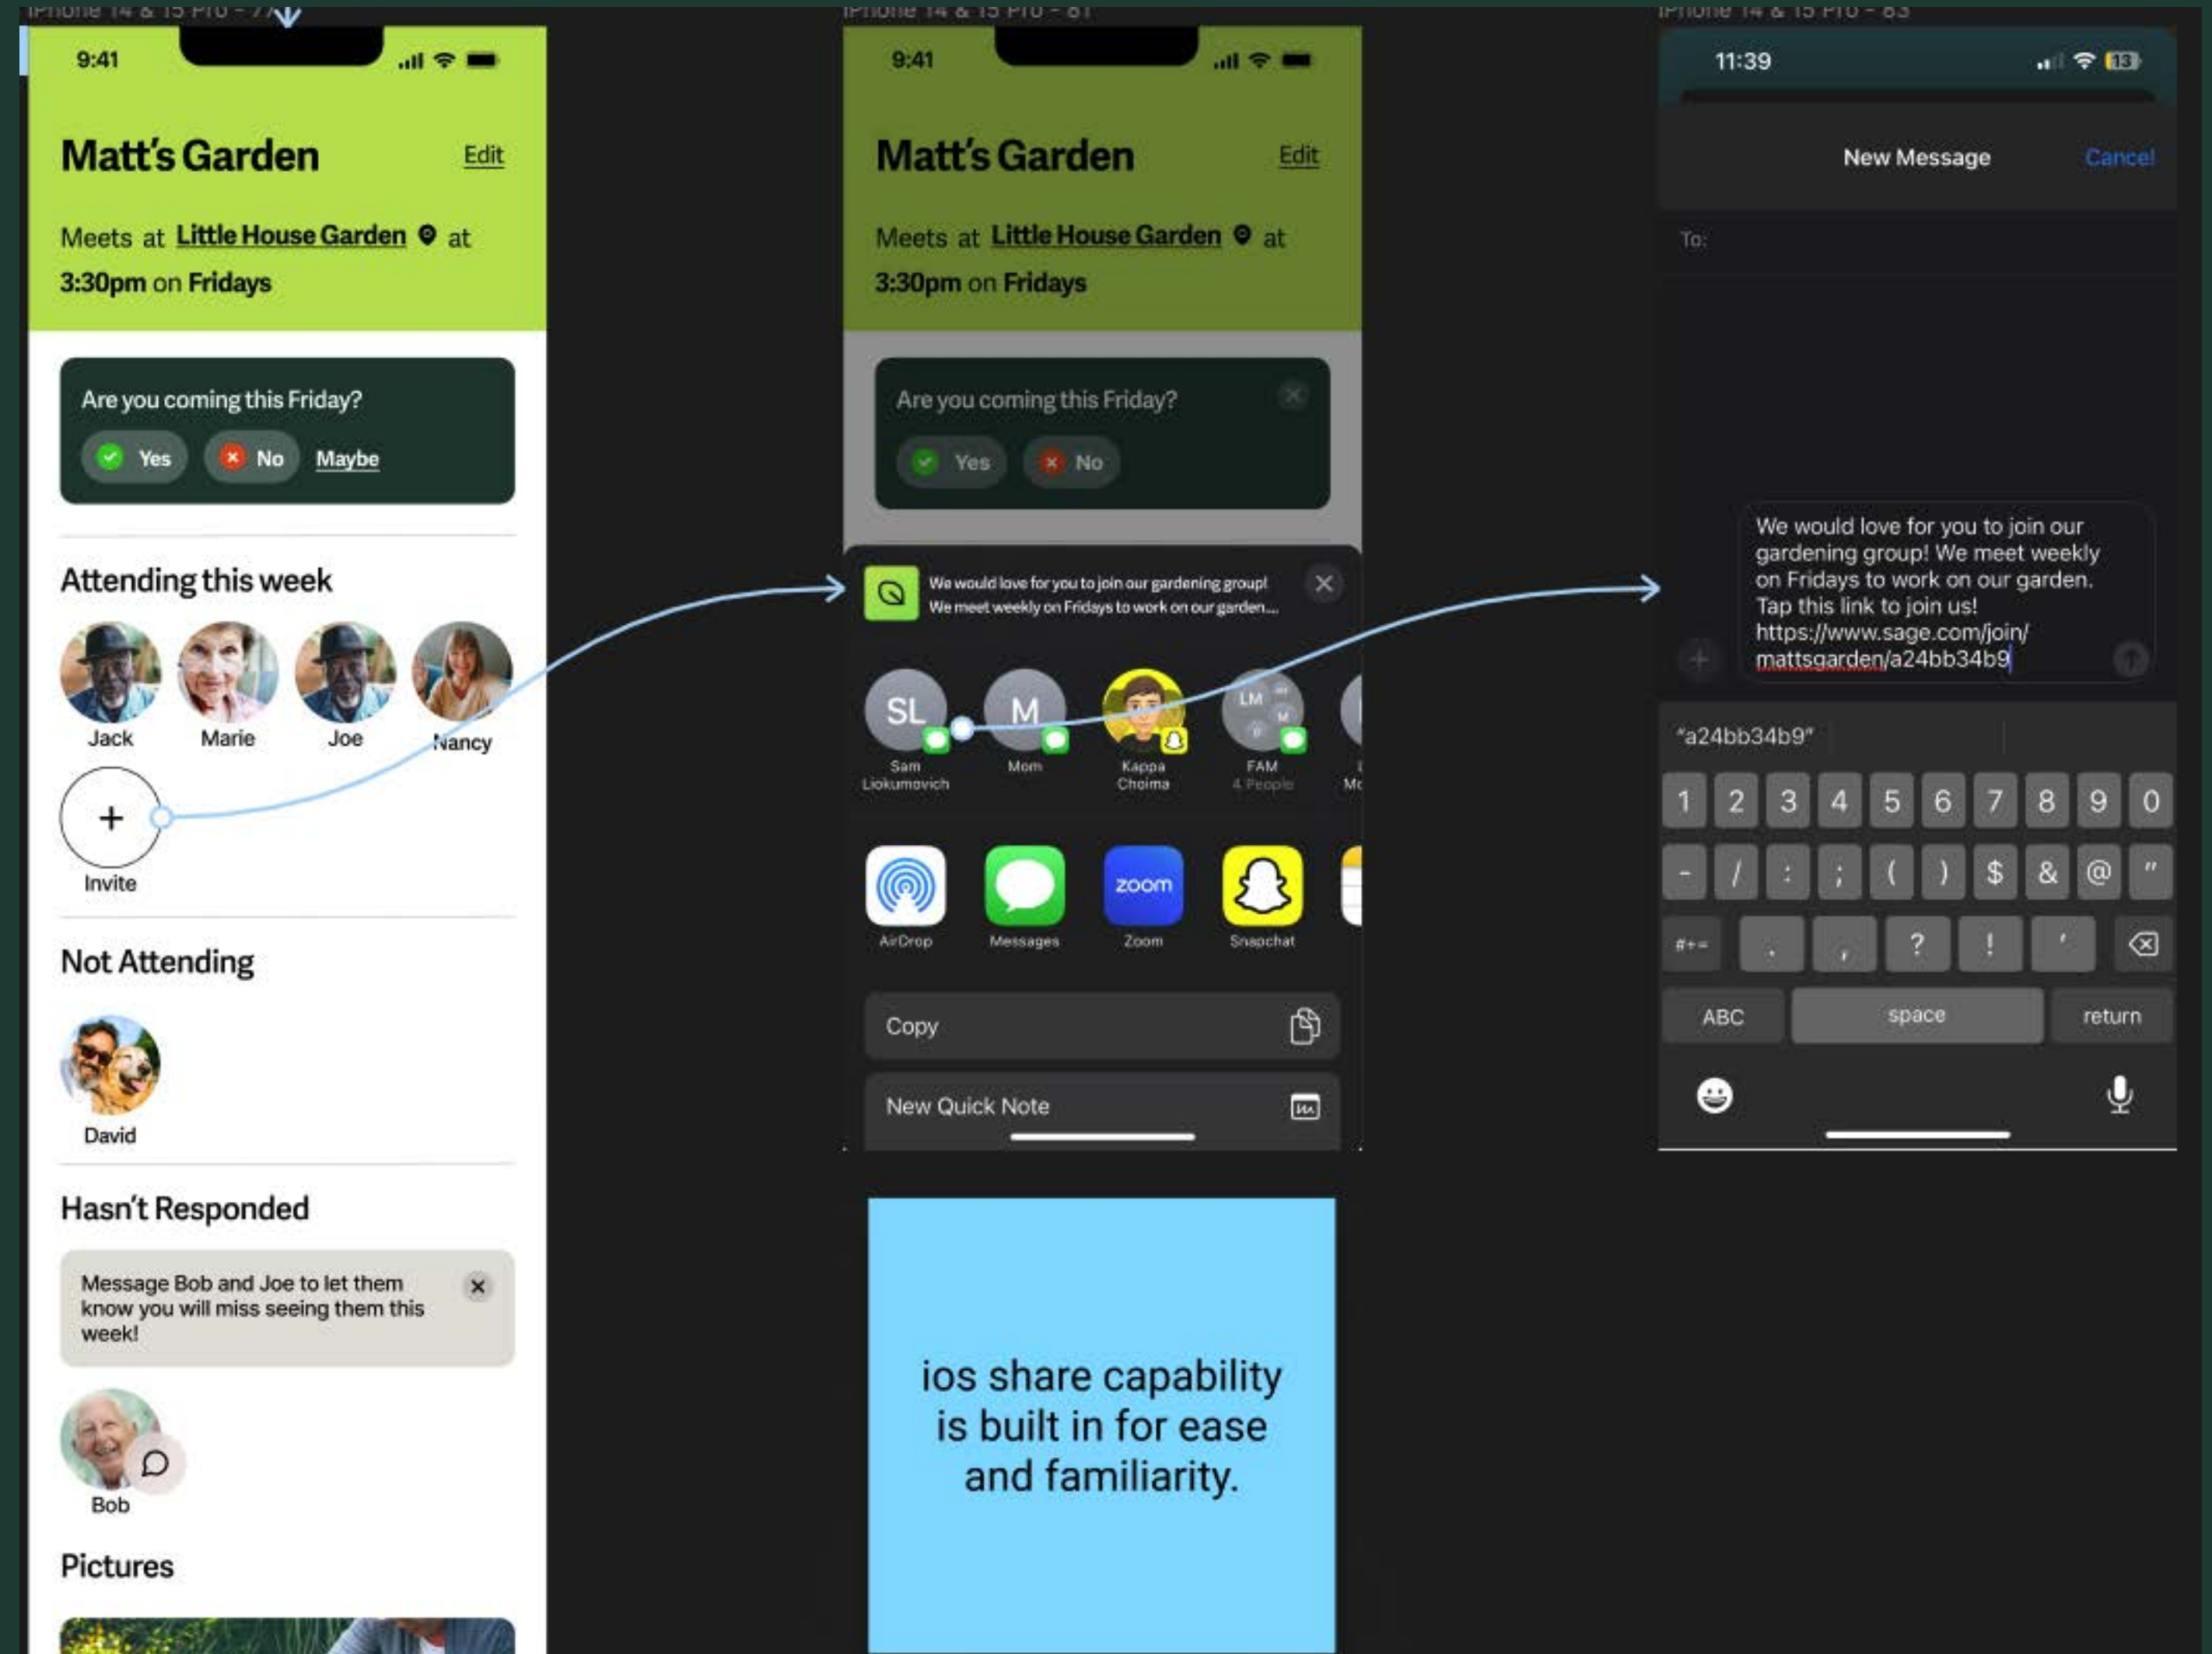

find out when and where to garden after creating or joining a group

One unified home screen
which contains all
necessary info about when
and where garden meets.
Clicking on location gives
more direction information
on 3rd party platform

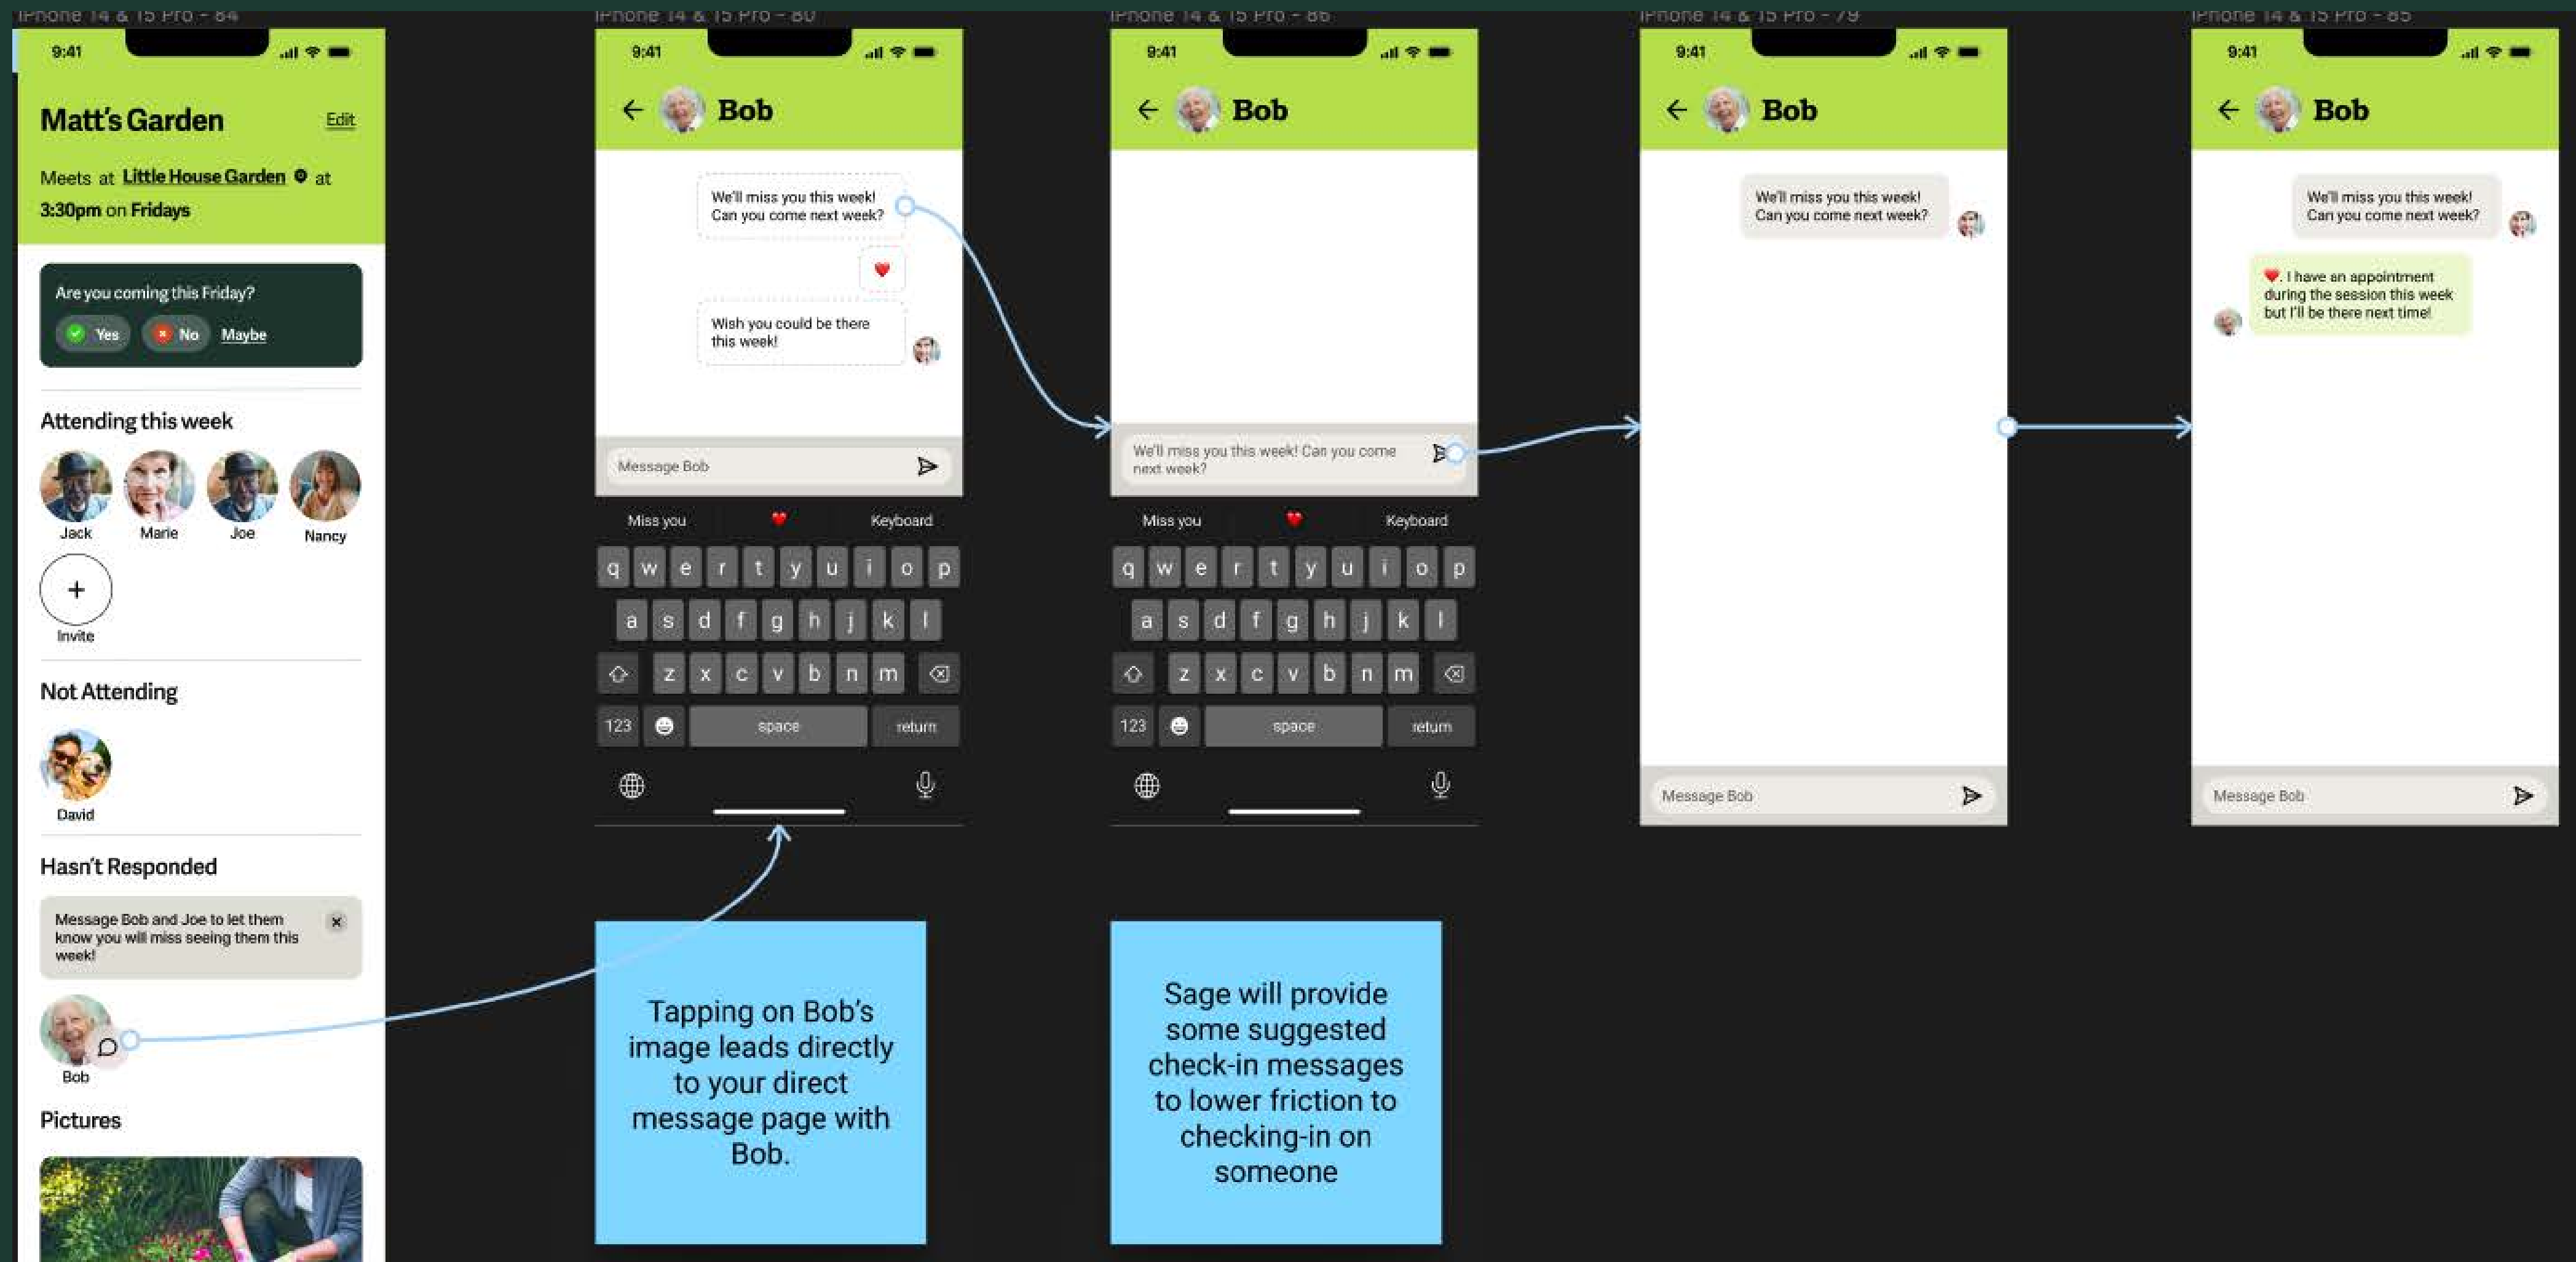

Simple Task Flow

Invite new group members

Complex Task Flow

Check-in on group members

Prototype Implementation — Tools

Pros

- Easy to collaborate with other team members
- Enables the creation of a cohesive design system
- Interactive prototyping shows realistic interactions and task flows

Cons

- Figma knowledge limited for certain team members
- More Figma files → more expensive

Prototype Implementation — Limitations

- Cannot input dynamic content — want people to get a sense of the platform without fully implementing all of the features
- Does not include advanced functionality and task flows — for purposes of med-fi prototyping, we decided to focus primarily on core functionality
- Contains untested elements — additional changes made to the prototype still need feedback from our users

Prototype Implementation — Wizard of Oz

- Available garden locations are simulated - given that we have not yet determined where users are allowed to organized gardens, we simulate this.
- Group dynamics have been simulated given that we do not yet have a database of users and backend to support consistency across screens.
- Dynamic selection of contacts list is simulated given that this requires advanced Apple integration and permission handling.
